HOLISTIC ANALYSIS AND MANAGEMENT OF DISTRIBUTED SOCIAL SYSTEMS

Springer This book describes the application of a high-level technology to solve problems in distributed systems that have networked structures with millions to billions of nodes. The main difference from other works is that the approach is based on holistically and simultaneously analysing these systems using a spatial pattern-matching mode, which produces solutions hundreds of times faster than usual. The latest version of the technology is described, together with implementation details and basic Spatial Grasp Language. In addition, the book highlights numerous solutions, covering graph and network problems, their use in large social, industrial, and business ecosystems, social robotics and driverless transport, and the possibility of extrapolating from known gestalt laws on distributed systems, which could potentially be applied in civil and defence contexts. The book is intended for system scientists, business and industry managers, economists, application programmers, security and defence personnel, as well as university students.

SPATIAL GRASP AS A MODEL FOR SPACE-BASED CONTROL AND MANAGEMENT SYSTEMS

CRC Press Governmental agencies and private companies of different countries are actively moving into space around Earth with the aim to provide smart communication and industry, security, and defense solutions. This often involves massive launches of small, cheap satellites in low earth orbits, which is also contributing to the growth of space debris.

The book offers a high-level holistic system philosophy, model, and technology that can effectively organize distributed space-based systems, starting with their planning, creation, and growth. The Spatial Grasp Technology described in the book, based on parallel navigation and pattern-matching of distributed environments with high-level recursive mobile code, can effectively provide any networking protocols and important system applications, by integrating and tasking available terrestrial and celestial equipment. This book contains practical examples of technology-based solutions for tracing hypersonic gliders, continuing observation of certain objects and infrastructures on Earth from space, space-based command and control of large distributed systems, as well as collective removal of increasing amounts of space junk. Earlier versions of this technology were prototyped and used in different countries, with the current version capable of being quickly implemented in traditional industrial or even university environments. This book is oriented toward system scientists, application programmers, industry managers, and university students interested in advanced MSc and PhD projects related to space conquest and distributed system management. Dr Peter Simon Sapaty, Chief Research Scientist, Ukrainian Academy of Sciences, has worked with networked systems for five decades. Outside of Ukraine, he has worked in the former Czechoslovakia (now Czech Republic and Slovakia), Germany, the UK, Canada, and Japan as a group leader, Alexander von Humboldt researcher, and invited and visiting professor. He launched and chaired the Special Interest Group (SIG) on Mobile Cooperative Technologies in Distributed Interactive Simulation project in the United States, and invented a distributed control technology that resulted in a European patent and books with Wiley, Springer, and Emerald. He has published more than 250 papers on distributed systems and has been included in the Marquis Who's Who in the World and Cambridge Outstanding Intellectuals of the 21st Century. Peter also works with several international scientific journals.

STRENGTHENING FORENSIC SCIENCE IN THE UNITED STATES

A PATH FORWARD

National Academies Press Scores of talented and dedicated people serve

the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. **Strengthening Forensic Science in the United States: A Path Forward** provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. **Strengthening Forensic Science in the United States** gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

GLOBAL RE-INTRODUCTION PERSPECTIVES: 2013 : FURTHER CASE-STUDIES FROM AROUND THE GLOBE

"This is the fourth issue in the Global Re-introduction Perspectives series and has been produced in the same standardized format as the previous three to maintain the style and quality. The casestudies are arranged in the following order: Introduction, Goals, Success Indicators, Project Summary, Major Difficulties Faced, Major Lessons Learned, Success of Project with reasons for success or failure. For the first issue I managed to collect 62 casestudies, the second issue 72 case-studies, the third issue 50 casestudies and this one 52 case-studies. These case studies in this issue cover the following taxa as follows: Invertebrates, Fish, Amphibians, Reptiles, Birds, Mammals, Plants... We hope the information presented in this book will provide a broad global perspective on challenges facing re-introduction projects trying to restore biodiversity."--Pritpal S. Soorae.

SLAVERY AND THE BRITISH COUNTRY HOUSE

In 2007 English Heritage commissioned initial research into links with transatlantic slavery or its abolition amongst families who owned properties now in its care. This was part of the commitment by English Heritage to commemorate the bicentenary of the abolition of the British transatlantic slave trade with work that would make a real difference to

our understanding of the historic environment in the longer term. The research findings and those of other scholars and heritage practitioners were presented at the 'Slavery and the British Country House' conference which brought together academics, heritage professionals, country house owners and community researchers from across Britain to explore how country houses might be reconsidered in the light of their slavery linkages and how such links have been and might be presented to visitors. Since then the conference papers have been updated and reworked into a cutting edge volume which represents the most current and comprehensive consideration of slavery and the British country house as yet undertaken.

UCLA

THE FIRST CENTURY

Third Millennium Publishing UCLA: The First Century is an extensively illustrated hardcover book which follows a chronological historical narrative with in-depth sections on campus traditions and the history of Bruin athletics. Since the UCLA History Project was launched in 2004, UCLA have been chronicling a full account of their alma mater, from humble beginnings to their current standing as one of the world's most prestigious public research universities. The research and editorial team for this publication delved into the untold number of historical documents and photographs preserved in UCLA's archives and beyond, interviewed numerous members of the UCLA community, and searched for materials and anecdotes that were on the verge of becoming permanently lost or forgotten. '100 years of UCLA on your coffee table.' Los Angeles Times "I wanted to create an authentic, historical account of our university. Every day I am inspired by the story of UCLA and I see its history as a collective, living legacy that we all share." Marina Dundjerski '94, Author 'The book is indeed beautiful. Thank you so much for all the work that went into it.' Rhea Turteltaub, Vice Chancellor, UCLA External Affairs

GORBODUC; OR, FERREX AND PORREX

Lincoln : University of Nebraska At the play's beginning, the argument gives the following summary of the play's action: "Gorboduc, King of

Britain, divided his realm in his lifetime to his sons, Ferrex and Porrex. The sons fell to dissention. The younger killed the elder. The mother that more dearly loved the elder, for revenge killed the younger. The people, moved with the cruelty of the fact, rose in rebellion and slew both father and mother. The nobility assembled and most terribly destroyed the rebels. And afterward for want of issue of the prince, whereby the succession of the crown became uncertain, they fell to civil war in which both they and many of their issues were slain, and the land for a long time almost desolate and miserably wasted."

TRANSNATIONAL MARKETING AND TRANSNATIONAL CONSUMERS

Springer Science & Business Media Transnational Marketing and Transnational Consumers are becoming increasingly common in today's globalizing and fast moving world of business. This book presents a fresh perspective focusing on the transnational character of organizations and firms while underlining the importance of the transnationality of marketing strategies for success. At the same time, it introduces the novel concepts of Transnational Consumers and Transnational Mobile Consumers which take into account the increasing human mobility and its implications for marketing success. This book gives flesh to the ever popular shorthand "glocal" referring to strategies thinking globally but acting locally. This is the reality of current business environment where the norm is fast mobility of goods, services, finance, and consumers. Transnational Mobility of Consumers is of increasing importance for understanding transnational marketing. Prof. Ibrahim Sirkeci's new book, Transnational Marketing and Transnational Consumers, deals with this important issue in an excellent way. The book is highly recommendable for both academics and practitioners in International Marketing. Svend Hollensen University of Southern Denmark Author of 'Global Marketing' (Pearson)

THE RISE AND FALL OF THE PLANTATION COMPLEX

ESSAYS IN ATLANTIC HISTORY

Cambridge University Press Over a period of several centuries, Europeans developed an intricate system of plantation agriculture overseas that was quite different from the agricultural system used at home. Though the plantation complex centered on the American tropics, its influence was much wider. Much more than an economic order for the Americas, the plantation complex had an important place in world history. These essays concentrate on the intercontinental impact.

It provides an extraordinary view of the Victorian values and attitudes that made Britain great.

TRIUMPH OF THE OPTIMISTS

101 YEARS OF GLOBAL INVESTMENT RETURNS

Princeton University Press Investors have too often extrapolated from recent experience. In the 1950s, who but the most rampant optimist would have dreamt that over the next fifty years the real return on equities would be 9% per year? Yet this is what happened in the U.S. stock market. The optimists triumphed. However, as Don Marquis observed, an optimist is someone who never had much experience. The authors of this book extend our experience across regions and across time. They present a comprehensive and consistent analysis of investment returns for equities, bonds, bills, currencies and inflation, spanning sixteen countries, from the end of the nineteenth century to the beginning of the twenty-first. This is achieved in a clear and simple way, with over 130 color diagrams that make comparison easy. Crucially, the authors analyze total returns, including reinvested income. They show that some historical indexes overstate long-term performance because they are contaminated by survivorship bias and that long-term stock returns are in most countries seriously overestimated, due to a focus on periods that with hindsight are known to have been successful. The book also provides the first comprehensive evidence on the long-term equity risk premium--the reward for bearing the risk of common stocks. The authors reveal whether the United States and United Kingdom have had unusually high stock market returns compared to other countries. The book covers the U.S., the U.K., Japan, France, Germany, Canada, Italy, Spain, Switzerland, Australia, the Netherlands, Sweden, Belgium, Ireland, Denmark, and South Africa. *Triumph of the Optimists* is required reading for investment professionals, financial economists, and investors. It will be the definitive reference in the field and consulted for years to come.

WHY STUDY HISTORY?

London Publishing Partnership Considering studying history at university? Wondering whether a history degree will get you a good job, and what you might earn? Want to know what it's actually like to study history at degree level? This book tells you what you need to know. Studying any subject at degree level is an investment in the future that involves significant cost. Now more than ever, students and their parents need to weigh up the potential benefits of university courses. That's where the *Why Study* series

comes in. This series of books, aimed at students, parents and teachers, explains in practical terms the range and scope of an academic subject at university level and where it can lead in terms of careers or further study. Each book sets out to enthuse the reader about its subject and answer the crucial questions that a college prospectus does not.

DETRACKING FOR EXCELLENCE AND EQUITY

ASCD Ability grouping. Leveling systems. Streaming. This is the modern way of talking about tracking -- the traditional practice of sorting and selecting students based on test scores and other criteria, and then steering these groups into "the most appropriate" course of study. In 1987, New York's suburban Rockville Centre School District faced the fact that its longstanding tracking system was resulting in unequal educational opportunities and allowing racial and socioeconomic stratification of its student population. School leaders embarked on an ambitious program of reform: reexamining beliefs about intelligence, ability, and instruction, and offering all students the opportunity to study a rigorous curriculum in heterogeneous classrooms. In this book, authors Carol Corbett Burris and Delia T. Garrity, veterans of the Rockville Centre School District, offer an experience-based and research-supported argument that detracking-- implemented with planning, patience, and persistence--can do in every school district what it did in theirs: raise achievement across the board and dramatically narrow the achievement gap. Their main goal is a practical one: to provide educational leaders with proven strategies for launching, sustaining, and monitoring a successful detracking reform. Here, you'll read * Why detracking is necessary, the benefits it brings, and how to build support among teachers and parents * How to revise curriculum to "level-up" instruction * How to establish a multiyear, personalized professional development program to help teachers address new instructional needs * How to best support effective teaching and learning in a heterogeneous classroom Detracking for Excellence and Equity outlines a comprehensive approach built on self-reflection, direct action, vigilant supervision, and a set of very clear beliefs: that schools and opportunity matter; that acceleration and enrichment will improve all students' achievement; and that all students deserve access to the best curriculum.

CHANGES OF REGIME AND SOCIAL DYNAMICS IN WEST JAVA

SOCIETY, STATE AND THE OUTER WORLD OF BANTEN, 1750-1830

BRILL This volume deals with the sultanate of Banten from the outbreak of the rebellion of 1750-52 to the launching of the Cultivation System in 1830. After the suppression of the rebellion by the Dutch East India Company (VOC), local society showed considerable vitality. The introduction by the VOC of forced exploitation of the pepper cultivation did not lead to a significant increase in production, but enabled the local elites to augment their power. In the late 18th century Asian traders (many Bugis and Chinese) and English country traders integrated Banten and its Sumatran territory Lampung into a vibrant inter-regional trading network. This trade pattern, which involved the exchange of pepper and the maritime and forest products demanded by the China market for opium, contributed to the emergence of a new economic order in insular South-East Asia. This study shows how the the society of Banten was in a state of constant transformation in reaction to the Western presence and the shifts of the world economy during the period from 1750 to 1830.

TRANSFORMING FREE SPEECH

THE AMBIGUOUS LEGACY OF CIVIL LIBERTARIANISM

Univ of California Press Contemporary civil libertarians claim that their works preserve a worthy American tradition of defending free-speech rights dating back to the framing of the First Amendment. *Transforming Free Speech* challenges the worthiness, and indeed the very existence of one uninterrupted libertarian tradition. Mark A. Graber asserts that in the past, broader political visions inspired libertarian interpretations of the First Amendment. In reexamining the philosophical and jurisprudential foundations of the defense of expression rights from the Civil War to the present, he exposes the monolithic free-speech tradition as a myth. Instead of one conception of the system of free expression, two emerge: the conservative libertarian tradition that dominated discourse from the Civil War until World War I, and the civil libertarian tradition that dominates later twentieth-century argument. The essence of the current perception of the American free-speech tradition derives from the writings of Zechariah Chafee, Jr. (1885-1957), the progressive jurist most responsible for the modern interpretation of the First Amendment. His interpretation, however, deliberately obscured earlier libertarian arguments linking liberty of speech with liberty of property. Moreover, Chafee stunted the development of a more radical interpretation of expression rights that would give citizens the resources and independence necessary for the effective exercise of free speech. Instead, Chafee maintained that the right to political and social commentary could be protected independent of material inequalities that might restrict access to

the marketplace of ideas. His influence enfeebled expression rights in a world where their exercise depends increasingly on economic power. Untangling the libertarian legacy, Graber points out the disjunction in the libertarian tradition to show that free-speech rights, having once been transformed, can be transformed again. Well-conceived and original in perspective, *Transforming Free Speech* will interest political theorists, students of government, and anyone interested in the origins of the free-speech tradition in the United States.

THE INFLUENCE OF GLOBAL ENVIRONMENTAL CHANGE ON INFECTIOUS DISEASE DYNAMICS

WORKSHOP SUMMARY

National Academies Press The twentieth century witnessed an era of unprecedented, large-scale, anthropogenic changes to the natural environment. Understanding how environmental factors directly and indirectly affect the emergence and spread of infectious disease has assumed global importance for life on this planet. While the causal links between environmental change and disease emergence are complex, progress in understanding these links, as well as how their impacts may vary across space and time, will require transdisciplinary, transnational, collaborative research. This research may draw upon the expertise, tools, and approaches from a variety of disciplines. Such research may inform improvements in global readiness and capacity for surveillance, detection, and response to emerging microbial threats to plant, animal, and human health. *The Influence of Global Environmental Change on Infectious Disease Dynamics* is the summary of a workshop hosted by the Institute of Medicine Forum on Microbial Threats in September 2013 to explore the scientific and policy implications of the impacts of global environmental change on infectious disease emergence, establishment, and spread. This report examines the observed and potential influence of environmental factors, acting both individually and in synergy, on infectious disease dynamics. The report considers a range of approaches to improve global readiness and capacity for surveillance, detection, and response to emerging microbial threats to plant, animal, and human health in the face of ongoing global environmental change.

AMERICAN BORN CHINESE

First Second A tour-de-force by rising indy comics star Gene Yang, *American Born Chinese* tells the story of three apparently unrelated characters: Jin Wang, who moves to a new neighborhood with his family only to discover that he's the only Chinese-American student at his new school; the powerful Monkey King, subject of one of the oldest and greatest Chinese fables; and Chin-Kee, a personification of the ultimate negative Chinese stereotype, who is ruining his cousin Danny's life with his

yearly visits. Their lives and stories come together with an unexpected twist in this action-packed modern fable. American Born Chinese is an amazing ride, all the way up to the astonishing climax. American Born Chinese is a 2006 National Book Award Finalist for Young People's Literature, the winner of the 2007 Eisner Award for Best Graphic Album: New, an Eisner Award nominee for Best Coloring and a 2007 Bank Street - Best Children's Book of the Year. CONSERVATION AND THE GENETICS OF POPULATIONS

John Wiley & Sons Conservation and the Genetics of Populations gives a comprehensive overview of the essential background, concepts, and tools needed to understand how genetic information can be used to develop

conservation plans for species threatened with extinction. Provides a thorough understanding of the genetic basis of biological problems in conservation. Uses a balance of data and theory, and basic and applied research, with examples taken from both the animal and plant kingdoms. An associated website contains example data sets and software programs to illustrate population genetic processes and methods of data analysis. Discussion questions and problems are included at the end of each chapter to aid understanding. Features Guest Boxes written by leading people in the field including James F. SUPPLY SHOCK

ECONOMIC GROWTH AT THE CROSSROADS AND THE STEADY STATE SOLUTION

New Society Publishers Politicians, economists, and Wall Street would have us believe that limitless economic expansion is the Holy Grail, and that there is no conflict between growing the economy and protecting the environment. Supply Shock debunks these widely accepted myths and demonstrates that we are in fact navigating the end of the era of economic growth, and that the only sustainable alternative is the development of a steady state economy. Starting with a refreshingly accessible, comprehensive critique of economic growth, the author engages readers in an enormous topic that affects everyone in every country. Publishers Weekly favorably compared Brian Czech to Carl Sagan for popularizing their difficult subjects; Supply Shock shows why. Czech presents a compelling alternative to growth based on keen scientific, economic, and political insights including: The "trophic theory of money" The overlooked source of technological progress that prevents us from reconciling growth and environmental protection Bold yet practical policies for establishing a steady state economy Supply Shock leaves no doubt that the biggest idea

of the twentieth century—economic growth—has become the biggest problem of the twenty-first. Required reading for anyone concerned about the world our children and grandchildren will inherit, this landmark work lays a solid foundation for a new economic model, perhaps in time for preventing global catastrophes; certainly in time for lessening the damages. Brian Czech is the founder of Center for the Advancement of the Steady State Economy (CASSE), the leading organization promoting the transition from unsustainable growth to a new economic paradigm.
