Agile Development of Diagnostic Knowledge Systems

[IOS Press](#) The success of diagnostic knowledge systems has been proved over the last decades. Nowadays, intelligent systems are embedded in machines within various domains or are used in interaction with a user for solving problems. However, the development of a knowledge system is still a critical issue. Similarly to projects dealing with customized software at a highly innovative level a precise specification often cannot be given in advance. Moreover, necessary requirements of the knowledge system can be defined not until the project has been started or are changing during the development phase. This thesis motivates that classical, document-centered approaches cannot be applied in such a setting. We introduce an agile process model for developing diagnostic knowledge systems, mainly inspired by the ideas of the eXtreme Programming methodology known in software engineering. The engineering process is supported at a primary level by the introduction of knowledge containers, that define an organized view of knowledge contained in the system. The actual knowledge is acquired and formalized right from start, and the integration to runnable knowledge systems is done continuously in order to allow for an early and concrete feedback. The validity and maintainability of the collected knowledge is ensured by appropriate test methods and restructuring techniques, respectively. Additionally, we propose learning methods to support the knowledge acquisition process sufficiently. The process model and its activities are evaluated in two real life applications: in a medical and in an environmental project the benefits of the agile development are clearly demonstrated.

Methods of Educational and Social Science Research

The Logic of Methods, Third Edition

[Waveland Press](#) As the new subtitle indicates, the book emphasizes the logic of methods to provide the student a solid basis for future methodology changes, enhancing the integrated approach of the previous edition. Among the author's many goals are for users to: understand research's contribution to knowledge building as a social process through which findings become accepted as knowledge; acquire the background to read, analyze, and understand research using a variety of approaches as well as the hallmarks necessary to evaluate each method; and realize that the responsibility for ethical research is fundamentally theirs and that value choices are involved, beginning with the choice of research problem. Updates to the new edition include an extensive example of the use of the computer in the literature search and a new chapter on the reflective researcher. The expanded treatment of qualitative research includes the pros and cons of using software in qualitative analysis. Conceptual analysis, an important concept missing from the second edition, has returned by request because of its widely employed logic in both qualitative and quantitative methods. The author has acknowledged the troublesome nature of the concepts internal validity and external validity and has more clearly defined these important foundational concepts as Internal Integrity and External Generality. Useful tools to facilitate learning include additional reading lists, important terms and concepts, tips on effective research methods and hallmarks of methods, application problems and exercises, a glossary, and an appendix on writing a research proposal. A Web site is available with auxiliary learning enhancements and updates.

Promoting Sustainable Innovations in Plant Varieties

Springer This book develops the term 'Sustainable Innovations' and defines it on the basis of plant variety innovations that, by their very nature, (i) permit the in situ conservation of agrobiodiversity and genetic variability in diverse geographic and climatic conditions, (ii) do not exclude any potential innovators from the process of innovation, and thereby (iii) ensure that both formal and informal innovations can continue to take place in the generations to come (in both the developed and developing world). The book studies the Indian Plant Variety Protection Act, the UPOV Acts and associated agricultural policies from a legal, philosophical, historical and economic perspective with the aim of determining the means of promoting sustainable innovations in plant varieties and identifying laws, policies and practices that are currently acting as impediments to promoting the same.

Creating Space in the Fifth Estate

[Cambridge Scholars Publishing](#) **Creating Space in the Fifth Estate** explores what is new and valued about the digital media environment. The deep and far-reaching changes that are being wrought by the digital revolution are as radical in their effect as the impact of the industrial revolution was in the nineteenth century. While the long-term significance of these changes is uncertain, the nature of the power of differing forms of media offers interesting possibilities for research, as does the potential for a new mainstream space that shares characteristics with older loci of power. This space is not, as this book suggests, merely a space for journalistic endeavors, as shown by contributions here examining a

diverse range of communication practices and forms including blogs, journalism, social media, digital literary magazines, disruptive twitter campaigns, and online music production. The book asks a number of questions. What exactly is the fifth estate? What are the power structures that exist there? What is the relationship between the fourth and fifth estates? What do we lose and what do we gain in that transition? How does the fifth estate change various forms of communication? How does the fifth estate constitute new communities and social movements? What about traditional forms that are still finding their niche in the new world? What actions do we as communicators and communication scholars now need to engage with? Why is it important? *Creating Space in the Fifth Estate* is accessible to scholars and students in a range of academic disciplines, including communication and media studies, sociology, cultural studies, and the arts. It will also appeal to those who work in the media and communication industries.
