Textbook of Receptor Pharmacology, Third Edition

CRC Press For the past four decades, University College London has offered a renowned course on receptor pharmacology. Originating from this course, the perennially bestselling Textbook of Receptor Pharmacology has presented in-depth coverage of this rapidly expanding area of research. This third edition continues to combine current understanding of classical quantitative pharmacology and drug-receptor interactions with the basics of receptor structure and signal transduction mechanisms, providing an integrated analysis of the mechanisms of drug action at membrane receptors. The hallmark of this popular text is the uniting of four major approaches to the study of receptors: Molecular investigation of receptor structure Quantitative functional studies of agonists and antagonists Ligand binding Signal transduction at the cell membrane Maintaining the second edition's focus on cell membrane receptors and the immediate signal transduction events at the membrane, this edition includes updated chapters on receptor structure and signal transduction by G-proteins and tyrosine kinases as well as enhancements to the quantitative treatment of drug-receptor interactions. Several chapters contain problems and worked-out solutions, giving students the ability to test their comprehension of the material. Hundreds of diagrams and figures further enhance

the text. A time-saving resource and comprehensive learning tool, Textbook of Receptor Pharmacology, Third Edition carries on the tradition of providing in-depth, up-to-date coverage of this critical area that is both fundamental to the science of pharmacology and on the cutting edge of new drug development.

Communication and Educational Technology - E-Book

Contemporary Pedagogy for Health Care Professionals

Elsevier Health Sciences Communication and Educational Technology is precisely written as per the syllabus prescribed for the undergraduate nursing studies. It is useful as an introductory textbook for the postgraduate nursing students and can also be of help for the other health care professionals to understand the concepts of communication and teaching-learning pedagogy. The book is an excellent attempt towards introducing the readers to the basics of communication and educational technology in the education of nurses and other health care professionals. The content has been updated and enriched by including new topics such as the following: Definition, types, organization, development process and models, and determinants of curriculum Meaning, purposes and components of item analysis including item difficulty, discrimination index and effectiveness of destructors The clinical teaching methods such as nursing case study, nursing case presentation, nursing rounds, bedside nursing clinics, nursing assignments, nursing care conference, health care team conference, process recording and field visit are presented in more details. A number of working examples have been added to facilitate ease of learning. A total of 350 multiple choice questions have been

included in this textbook: 150 MCQs are placed within the end-of-chapter exercises and 200 comprehensive MCQs are placed in Appendix B. These will be useful for the readers to prepare for qualifying the postgraduate and doctoral level nursing entrance exams and nursing faculty/teachers' recruitment exams. Every chapter has been provided with Learning Objectives and Key Terms in its beginning.

Drug Screening Methods

Anshan Pub Drug discovery and development is a challenging, expensive and time consuming field of research, requiring contributions from chemists, pharmacologists, toxicologists, clinicians, and practitioners. The ultimate goal is to generate a safe and biologically active drug which can stall, or even reverse, the pathological events that cause the disease condition. But in the search for the drug a host of tests and trials must be applied to evaluate the efficiency and safety of the newly developed molecule in the biological system. These trials or "screening methods" are critical. On their basis, the new molecule either becomes accepted for usage, or is discarded forever. Advances in drug research have forced the need for quicker, more automated screening methods, using molecular techniques applied in vitro, in vivo and in clinical systems. Researchers need to know the latest developments outside their own speciality. With this book, Professor Gupta has brought together in one coherent volume the most up to date developments of consolidated screening methods for biological systems. By paying attention to the practical techniques used in academia and the commercial pharmaceutical industry, "Drug Screening Methods" will enjoy a broad readership, serving both the professional community and the student of pharmacology.
