BIOCHEMISTRY AND CLINICAL PATHOLOGY

CBS Confident Pharmacy *The third edition of this popular and textbook in biochemistry and clinical pathology includes questions from papers in recent examinations. It has been written to meet the requirements of students working towards a diploma in pharmacy. Written in a easy to understand language, it attempts to demystify and simplify the basic concepts in order for students to fully understand the subject and ensure success in their examinations.*

PHARMACEUTICS

FOR FIRST YEAR DIPLOMA IN PHARMACY

CBS Confident Pharmacy *The third edition of the now popular and successful book includes Board Question Papers 2010 to 2017. The book is written, presented and published to meet the requirements of students of diploma in pharmacy. Written in a lucid and simple language, it attempts to demystify and simplify the basic concepts for the students of pharmacy for proper understanding of the subject and to get a sure success in the state board examinations.*

PHARMACEUTICAL BIOTECHNOLOGY

Springer Science & Business Media *Pharmaceutical Biotechnology is a unique compilation of reviews addressing frontiers in biologicals as a rich source for innovative medicines. This book fulfills the needs of a broad community of scientists interested in biologicals from diverse perspectives—basic research, biotechnology, protein engineering, protein delivery, medicines, pharmaceuticals and vaccinology. The diverse topics range from advanced biotechnologies aimed to introduce novel, potent engineered vaccines of unprecedented efficacy and safety for a wide scope of human diseases to natural products, small peptides and polypeptides engineered for discrete prophylaxis and therapeutic purposes. Modern biologicals promise to dramatically expand the scope of preventive medicine beyond the infectious disease arena into broad applications in immune and cancer treatment, as exemplified by anti-EGFR receptors antibodies for the treatment of breast cancer. The exponential growth in biologicals such as engineered proteins and vaccines has been boosted by unprecedented scientific breakthroughs made in the past decades culminating in an in-depth fundamental understanding of the scientific underpinnings of immune mechanisms together with knowledge of protein and peptide scaffolds that can be deliberately manipulated. This has in turn led to new strategies and processes. Deciphering the human, mammalian and numerous pathogens' genomes provides opportunities that never before have been available—identification of discrete antigens (genomes and antigenomes) that lend themselves to considerably improved antigens and monoclonal antibodies, which with more sophisticated engineered adjuvants and agonists of pattern recognition receptors present in immune cells, deliver unprecedented safety and efficacy. Technological development such a nanobiotechnologies (dendrimers, nanobodies and fullerenes), biological particles (viral-like particles and bacterial ghosts) and innovative vectors (replication-competent attenuated, replication-incompetent recombinant and defective helper-dependent vectors) fulfill a broad range of cutting-edge research, drug discovery and delivery applications. Most recent examples of breakthrough biologicals include the human papilloma virus vaccine (HPV, prevention of women genital cancer) and the multivalent Pneumococcal vaccines, which has virtually eradicated in some populations a most prevalent bacterial ear infection (i.e., otitis media). It is expected that in the years to come similar success will be obtained in the development of vaccines for diseases which still represent major threats for human health, such as AIDS, as well as for the generation of improved vaccines against diseases like pandemic flu for which vaccines are currently available. Furthermore, advances in comparative immunology and innate immunity revealed opportunities for innovative strategies for ever smaller biologicals and vaccines derived from species such as llama and sharks, which carry tremendous potential for innovative biologicals already in development stages in many pharmaceutical companies. Such recent discoveries and knowledge exploitations hold the promise for breakthrough biologicals, with the coming decade. Finally, this book caters to individuals not directly engaged in the pharmaceutical drug discovery process via a chapter outlining discovery, preclinical development, clinical development and translational medicine issues that are critical the drug development process. The authors and editors hope that this compilation of reviews will help readers rapidly and completely update knowledge and understanding of the frontiers in pharmaceutical biotechnologies.*

A LABORATORY MANUAL OF PHARMACOGNOSY

Serving as a complete guide to the subject, this volume is made up of four chapters supported by 31 experiments. The manual allows students and faculty to record their observations and results, as well as to draw diagrams.

ENERGY MANAGEMENT**PRACTICAL PHARMACEUTICS****AN INTERNATIONAL GUIDELINE FOR THE PREPARATION, CARE AND USE OF MEDICINAL PRODUCTS**

Springer *This book contains essential knowledge on the preparation, control, logistics, dispensing and use of medicines. It features chapters written by experienced pharmacists working in hospitals and academia throughout Europe, complete with practical examples as well as information on current EU-legislation. From prescription to production, from usage instructions to procurement and the impact of medicines on the environment, the book provides step-by-step coverage that will help a wide range of readers. It offers product knowledge for all pharmacists working directly with patients and it will enable them to make the appropriate medicine available, to store medicines properly, to adapt medicines if necessary and to dispense medicines with the appropriate information to inform patients and caregivers about product care and how to maintain their quality. This basic knowledge will also be of help to industrial pharmacists to remind and focus them on the application of the medicines manufactured. The basic and practical knowledge on the design, preparation and quality management of medicines can directly be applied by the pharmacists whose main duty is production in community and hospital pharmacies and industries. Undergraduate as well as graduate pharmacy students will find knowledge and backgrounds in a fully coherent way and fully supported with examples.*

COMPREHENSIVE MCQ IN ORGANIC CHEMISTRY

Pharmamed Press *Comprehensive MCQs in Organic Chemistry book intends to provide free learning tools to students who aspire to appear for various entrance examinations. We have captured several approachable areas of learning beyond providing students with question bank of their official entrance. This book will facilitate undergraduate and graduate students*

ESSENTIALS OF MEDICAL PHARMACOLOGY

Jaypee Brothers, Medical Publishers Pvt. Limited *This new edition has been fully revised to bring pharmacologists and trainees fully up to date with the latest developments in the field of medical pharmacology. Beginning with an introduction to general pharmacological principles, the following sections discuss drugs for common and less common disorders found in different regions of the body. The seventh edition includes new drugs, as well as the latest therapeutic guidelines from authoritative sources such as the World Health Organisation (WHO) and the British National Formulary (BNF). Each topic includes key point summary boxes as well as illustrations, flowcharts and tables to enhance learning. A 'problem-directed study' question at the end of each chapter helps trainees test their knowledge. An extensive appendices section includes a list of essential medicines, drugs that should/shouldn't be prescribed in pregnancy and lactation, and suggestions for further reading. Key points Fully revised, new edition presenting latest developments in medical pharmacology Includes therapeutic guidelines from WHO and BNF Problem-directed study questions and key point summary boxes enhance learning Previous edition published in 2008*

PHARMACOLOGY TEST PREP**1500 USMLE-STYLE QUESTIONS & ANSWERS**

Thieme *Pharmacology Test Prep is an outstanding collection of 1500 clinical multiple-choice questions written according to USMLE guidelines and classified by learning objective and difficulty. The questions and answers in this book cover all the areas that are included in topic-based and organ system-based courses in the first two years of medical school. This book provides medical students preparing to take the USMLE with a thorough review of pharmacology concepts and is an excellent review book for those needing to brush up on pharmacology for their rotations. Key Features: Questions require students to analyze information before choosing the best answer Full explanations are included with answers, giving students a comprehensive USMLE review tool Organized along clinical as well as pharmacological lines, making it suitable for both Step 1 and Step 2 exam preparation*

INTRODUCTION TO BASICS OF PHARMACOLOGY AND TOXICOLOGY**VOLUME 2 : ESSENTIALS OF SYSTEMIC PHARMACOLOGY : FROM PRINCIPLES TO PRACTICE**

Springer Nature *This book explains the pharmacological relationships between the various systems in the human body. It offers a comprehensive overview of the pharmacology concerning the autonomic, central, and peripheral nervous systems. Presenting up-to-date information on chemical mediators and their significance, it highlights the therapeutic aspects of several diseases affecting the cardiovascular, renal, respiratory, gastrointestinal, endocrinal, and hematopoietic systems. The book also includes drug therapy for microbial and neoplastic diseases. It also comprises sections on immunopharmacology, dermatological, and ocular pharmacology providing valuable insights into these emerging and recent topics. Covering the diverse groups of drugs acting on different systems, the book reviews their actions, clinical uses, adverse effects, interactions, and subcellular mechanisms of action. It is divided into 11 parts, subdivided into several chapters that evaluate the basic pharmacological principles that govern the different types of body systems. This book is intended for academicians, researchers, and clinicians in industry and academic institutions in pharmaceutical, pharmacological sciences, pharmacy, medical sciences, physiology, neurosciences, biochemistry, molecular biology and other allied health sciences.*

QUALITY CONTROL OF HERBAL DRUGS**AN APPROACH TO EVALUATION OF BOTANICALS****INTRODUCTION TO PHARMACEUTICS, VOL. I , 3E****PLANT CELL BIOTECHNOLOGY**

Springer Science & Business Media *In the past there were many attempts to change natural foodstuffs into high-value products. Cheese, bread, wine, and beer were produced, traditionally using microorganisms as biological tools. Later, people influenced the natural process of evolution by artificial selection. In the 19th century, observations regarding the dependence of growth and reproduction on the nutrient supply led to the establishment of agricultural chemistry. Simultaneously, efforts were directed at defining the correlation between special forms of morphological differentiation and related biochemical processes. New experimental systems were developed after the discovery of phytohormones and their possible use as regulators of growth and differentiation. In these systems, intact plants or only parts of them are cultivated under axenic conditions. These methods, called "in vitro techniques", were introduced to modern plant breeding. In the field of basic research, plant cell cultures were increasingly developed and the correlations between biochemical processes and visible cell variations were explored further. It should be possible to manipulate the basic laws of regulation and the respective biochemical processes should be regarded as being independent of morphological processes of plant development.*

SCREENING METHODS IN PHARMACOLOGY

Elsevier *Screening Methods in Pharmacology, Volume II* is a collection of papers that presents practical techniques and information on the selection of a screening program for a particular pharmacological activity. The book contains the most reliable, simplest, and the most preferred screening methods in pharmacology. The text presents screening methods for alpha and beta Adrenergic blocking agents; compounds for antianginal activity; topical products for excessive eccrine sweating; antidepressant agents; and agents with analgesic and analgesic antagonist activity. Pharmacologists, pharmacists, researchers, and physicians will find this book a good source of information.
