MEETING THE PUMP USERS NEEDS

THE PROCEEDINGS OF THE 12TH INTERNATIONAL PUMP TECHNICAL CONFERENCE

Elsevier Meeting the Pump Users Needs is a documentation of the 12th International Pump Technical Conference. Pump makers have always understood that their equipment provides an essential service to the pump users. Pumps have been designed and built to satisfy the needs of the user. The main thrust of this book is to share between users, specifiers, and makers their knowledge and experiences leading to better understanding of what the user needs now and would like for the future, and what the designer/maker can provide now and may be able to offer for the future. This book also describes an unusual method of calculating a head generated across a multistage pump when the impeller diameters are changed. The method leads to significantly larger calculated changes of head than predicted from the conventional affinity law approach. This text is a useful reference and source of information for engineering students and those conducting research on pump manufacturing.

TAI-PAN

Blackstone Publishing "There can only be one Tai-Pan." Dirk Struan rose from humble beginnings to build Struan & Company, also known as the Noble House, into the world's largest Far East trading company. He is now the Tai-Pan—Supreme Leader—of all Tai-Pans in China. Along the way, however, he made a powerful enemy. Tyler Brock, Struan's rival from their early opium-smuggling days, also heads a large trading fleet, second in size only to Struan's. But it is not only silks and spices that drive their mutual companies' wealth—the opium trade is still booming. War between England and China might be over, but the hostilities remain. Struan and Brock come to control much of England's trade with China yet neither can control their desires or their hatred of each other. Over the years, their two families will cross paths, threatening to rip both apart, with reverberations that will echo across the generations. Struan must fight to save his company and his family, or risk seeing everything he has created destroyed at the hands of his sworn enemy. Ambition, political intrigue, and love and lust weave their way throughout the novel the New York Times called, "grand entertainment...packed with action...with blood and sin, treachery and conspiracy, sex and murder." East and West come together in an opulent and intricately plotted narrative. A tour-de-force of historical fiction, rich in detail yet eminently readable, Tai-Pan will stay with you long after the final page.

THE ADMINISTRATION OF THE NORMAN KINGDOM OF SICILY

BRILL The administration of the Norman Kingdom of Sicily has long been held up to be the most advanced government in twelfth-century Europe. However, until now there has been considerable confusion about how this bureaucracy actually functioned, whether it developed in the twelfth century or retained the form given it by Roger II; whether it had regional variations, what the identity of different departments of government was, who did what within the structures of government, and what the relationship between the Greek, Arabic and Latin elements within the administration was. This work goes a long way to sorting out these problems. The author's meticulous work with chronicles and charters enables him to clear up many problems and mysteries in the administration of finance and justice and to identify such uncertainties as remain. This fundamental work forms a basic reference point for future studies of Norman Sicily and of government in the high Middle Ages.

PREDICTIVE MAINTENANCE OF PUMPS USING CONDITION MONITORING

Elsevier This book shows how condition monitoring can be applied to detect internal degradation in pumps so that appropriate maintenance can be decided upon based on actual condition rather than arbitrary time scales. The book focuses on the main condition monitoring techniques particularly relevant to pumps (vibration analysis, performance analysis). The philosophy of condition monitoring is briefly summarised and field examples show how condition monitoring is applied to detect internal degradation in pumps. * The first book devoted to condition monitoring and predictive maintenance in pumps. * Explains how to minimise energy costs, limit overhauls and reduce maintenance expenditure. * Includes material not found anywhere else.

SOMETHING HAPPENED

Random House Bob Slocum was a promising executive. He had an attractive wife, three children, a nice house, and as many mistresses as he desired. His life was settled and ordered; he had conformed and society demanded he be happy - or at least pretend to be. But the pretence was becoming more and more difficult, as Slocum's discontent grew into an overwhelming sense of desolation, frustration and fear. And then something happened. . .
