Advances in Informatics and Computing in Civil and Construction Engineering Proceedings of the 35th CIB W78 2018 Conference: IT in Design, Construction, and Management Springer This proceedings volume chronicles the papers presented at the 35th CIB W78 2018 Conference: IT in Design, Construction, and Management, held in Chicago,

IL, USA, in October 2018. The theme of the conference focused on fostering, encouraging, and promoting research and development in the application of integrated information technology (IT) throughout the life-cycle of the design, construction, and occupancy of buildings and related facilities. The CIB - International Council for Research and Innovation in Building Construction - was established in 1953 as an association whose objectives were to stimulate and facilitate international cooperation and information exchange between governmental research institutes in the building and construction sector, with an emphasis on those institutes engaged in technical fields of research. The conference brought together more than 200 scholars from 40 countries, who presented the innovative concepts and methods featured in this collection of papers. The Designer's Field Guide to Collaboration Routledge The Designer's Field Guide to Collaboration provides practitioners and students with the tools necessary to collaborate effectively with a wide variety of partners in an increasingly socially complex and technology-driven design environment. Beautifully illustrated with color images, the book draws on the expertise of top professionals in the allied fields of architecture, landscape architecture, engineering and construction management, and brings to bear research from diverse disciplines such as software development, organizational behavior, and outdoor leadership training. Chapters examine emerging and best practices for effective team building, structuring workflows, enhancing communication, managing conflict, and developing collective vision--all to ensure the highest standards of design excellence. Case studies detail and reflect on the collaborative processes used to create award-winning projects by Studio Gang, Perkins+Will, Tod Williams Billie Tsien Architects | Partners, Gensler, CDR Studio, Mahlum Architects, In.Site:Architecture, and Thornton Tomasetti's Core Studio. The book also provides pragmatic ideas and formal exercises for brainstorming productively, evaluating ideas, communicating effectively, and offering feedback. By emphasizing the productive influence and creative possibilities of collaboration within the changing landscape of architectural production, the book proposes how these practices can be taught in architecture school and expanded in practice. In a changing world that presents increasingly complex challenges, optimizing these collaborative skills will prove not only necessary, but crucial to the process of creating advanced architecture. A wonderful book about this endlessly fascinating man” (The New York Times Book Review).** When we think about the creation of the atom bomb, we may think of Albert Einstein, Enrico Fermi, J. Robert Oppenheimer, or Edward Teller. Yet one name that is rarely mentioned is Leo Szilard, though he is known in scientific circles as “father of the atom bomb.” The man who first developed the idea of harnessing energy from nuclear chain reactions, he is curiously buried with barely a trace in the history of this controversial topic. Born in Hungary and educated in Berlin, he escaped Hitler’s Germany in 1933. In order to prevent Nazi scientists from stealing his ideas about nuclear chain reactions, he kept his theories secret, until he and Albert Einstein pressed the US government to research atomic reactions and designed the first nuclear reactor. Though he started his career lobbying for civilian control of atomic energy, he concluded it with founding, in 1962, the first political action committee for arms control, the Council for a Livable World. This is the story of the remarkable life of a unique and colorful character. “Cast[s] welcome light on the physicist’s career and character . . . Szilard was at the epicenter of the Manhattan Project—indeed, he patented the first reactor design with Enrico Fermi—but his concern over the destructive uses of atomic power (and a degree of personal eccentricity) isolated him from the celebrity (and Nobel prizes) that came to other founding fathers of quantum physics.” —Publishers Weekly “Mind-blowing Szilardian anecdotes fill almost every page, making this one of the most entertaining stories in recent years.” —The New York Times Book Review Catalog of Copyright Entries.
