Meningococcal Vaccines

Methods and Protocols

[Springer Science & Business Media](#) The development of a comprehensive vaccine against *Neisseria meningitidis*, the causative agent of meningococcal disease, has remained elusive because of bacterial diversity and immunologic evasion. In *Meningococcal Vaccines: Methods and Protocols*, Andrew Pollard and Martin Maiden have assembled an impressive collection of the latest molecular and cellular techniques for the development, evaluation, and implementation of vaccines to be used against this dreaded disease. The contributors-leading scientists, clinicians, and public health physicians-describe in detail the many approaches to vaccine design, as well as the assessment of immune response to vaccine candidates and novel vaccine formulations. They also present as a test case the recent implementation of a new meningococcal vaccine in the United Kingdom. A companion volume, *Meningococcal Disease: Methods and Protocols*, contains detailed methods for diagnostic microbiology, bacterial characterization, epidemiology, host-pathogen interactions, and clinical studies. Timely and comprehensive, *Meningococcal Vaccines: Methods and Protocols* provides the scientist, public health physician, epidemiologist, clinical microbiologist, and clinician with the essential tools to lay bare the secrets of the meningococcus and to develop, evaluate, and implement successful new meningococcal vaccines.

Modern Cosmology and Religion

Albatross Press Ltd Where is God in the universe if anywhere? Why did God make germs? Why should we be so special? Could the universe have been different? This is a book that brings home, in no uncertain fashion, the discrepancy between the universe envisaged by the ancient sages and prophets and that of modern scientific cosmology, where the possibility of divine intervention looks less and less likely. Butchins demonstrates with clarity how the scientific method may be used, despite certain drawbacks, in an attempt to verify objective truth. It describes how the effect of the Copernican Revolution in the seventeenth century has steadily undermined the basic structure of the three great monotheistic religions of our day, Judaism, Christianity, and Islam, especially with respect to their eschatological concepts. The Eastern religions, being less anthropomorphic, are less affected. The theistic argument from design is shown to be powerful enough to have caused disagreement among present-day scientists, in spite of the strictures of Professor Dawkins. In general, the book attempts to make some sense of the structure of the universe in terms of our own consciousness; it behoves the reader to consider tha

Aging Methods and Protocols

Springer Science & Business Media With rapidly rising life expectancies and a general lack of understanding about the aging process, the need to treat geriatric diseases is becoming an ever more significant private and public health issue. In *Aging Methods and Protocols*, Yvonne and Christopher Barnett and a team of recognized international experts detail key biochemical, analytical, and molecular techniques for the investigation of aging at the cellular, tissue, organ, and whole system levels. These cutting-edge methods address a wide range of research needs, from uncovering the factors associated with cell senescence and death, to exploring alterations in the body's ability both to metabolize xenobiotics, and to defend itself against biomolecular damage. State-of-the-art protocols also measure the morphological, functional, and molecular changes that accumulate within mitochondria over time, and permit the genetic and functional characteristics of the immune system to be determined. Two important case studies examine the role of dietary restriction on life span extension and the use of transgenic animals in the molecular analysis of aging. Wide ranging and highly practical, *Aging Methods and Protocols* provides today's molecular gerontologists, pharmacologists, and clinical investigators with a gold-standard collection of readily reproducible techniques for identifying those key cellular and molecular processes that might one day make it possible to regulate the aging process.

The molecular, cellular, and tissue determinants of different tumours are discussed showing that each is a different disease, often corresponding to a particular developmental stage. The natural history of several cancers illustrates how clinical incidence can be just the visible part of the iceberg, while the first changes at the tissue level sometimes occur several years before tumour growth becomes manifest.
