THE AMERICAN PSYCHIATRIC ASSOCIATION PRACTICE GUIDELINES FOR THE PSYCHIATRIC EVALUATION OF ADULTS, THIRD EDITION

American Psychiatric Pub Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric

evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

SEXUAL AGGRESSION AGAINST CHILDREN

PEDOPHILES' AND ABUSERS' DEVELOPMENT, DYNAMICS, TREATABILITY, AND THE LAW

Routledge In Sexual Aggression Against Children: Pedophiles' and Abusers' Development, Dynamics, Treatability, and the Law, Drs. Blackman and Dring use multiple psychoanalytic principles to answer, "Why do people sexually abuse children?" and "Why are most abusers male"? They address the legal and mental health professions' minimization of the horrific nature of child sexual abuse, explain how to assess pedophiles' treatability, and discuss cases of adolescent and adult predators. Also, developmental analysis of sexual predation is integrated with a review of judicial decisions regarding civil commitment and punishment of abusers. The authors suggest how courts, evaluators, and legislatures can preserve constitutional rights of sexual offenders while prioritizing protection of children.

THE AMERICAN PSYCHIATRIC ASSOCIATION PRACTICE GUIDELINE FOR THE PHARMACOLOGICAL TREATMENT OF PATIENTS WITH ALCOHOL USE DISORDER

American Psychiatric Pub Alcohol use disorder (AUD) is a major public health problem in the United States. The estimated 12-month and lifetime prevalence values for AUD are 13.9% and 29.1%, respectively, with approximately half of individuals with lifetime AUD having a severe disorder. AUD and its sequelae also account for significant excess mortality and cost the United States more than \$200 billion annually. Despite its high prevalence and numerous negative consequences, AUD remains undertreated. In fact, fewer than 1 in 10 individuals in the United States with a 12-month diagnosis of AUD receive any treatment. Nevertheless, effective and evidence-based interventions are available, and treatment is associated with reductions in the risk of relapse and AUD-associated mortality. The American Psychiatric Association Practice Guideline for the Pharmacological Treatment of Patients With Alcohol Use Disorder seeks to reduce these substantial psychosocial and public health consequences of AUD for millions of affected individuals. The guideline focuses specifically on evidence-based pharmacological treatments for AUD in outpatient settings and includes additional information on assessment and treatment planning, which are an integral part of using pharmacotherapy to treat AUD. In addition to reviewing the available evidence on the use of AUD pharmacotherapy, the guideline offers clear, concise, and actionable recommendation statements, each of which is given a rating that reflects the level of confidence that potential benefits of an intervention outweigh potential harms. The guideline provides guidance on implementing these recommendations into clinical practice, with the goal of improving quality of care and treatment outcomes of AUD.

SOCIOLOGY

EXPLORING THE ARCHITECTURE OF EVERYDAY LIFE

SAGE Publications In Sociology: Exploring the Architecture of Everyday Life, Eleventh Edition, David M. Newman continues to show students how to see the “unfamiliar in the familiar”—to step back and see organization and predictability in their take-for-granted personal experiences. With his approachable writing style and lively personal anecdotes, the author’s goal since the first edition has been the same: to write a textbook that “reads like a real book.” Newman uses the metaphors of “architecture” and “construction,” to help students understand that society is not something that exists “out there,” independently of them; it is a human creation that is planned, formed, maintained, or altered by individuals. Using vivid prose, current examples, and fresh data, this text presents a unique and thought-provoking overview of how society is constructed and experienced. Instead of surveying every subfield in sociology, the more streamlined coverage focuses on the individual and society, the construction of self and society, and social inequality in the context of social structures.

SIX BY TEN

STORIES FROM SOLITARY

Haymarket Books An estimated 80,000 Americans are held in solitary confinement in prisons across the country. Solitary confinement, often in cells no bigger than 6 by 10 feet, means 24 hours per day with little or no meaningful human contact. Six By Ten explores the mental, physical, and spiritual impacts of America’s widespread embrace of solitary confinement, as told through the first-person narratives of individuals subjected to solitary confinement, family members on the outside, and corrections officers. Each chapter presents a different individual’s story and probes how Americans from all over the country and all walks of life find themselves held in solitary for years or even decades at a time.
