Practical Ship Design

Elsevier *The ever-growing demand for commercial activities at sea has meant that ships are rapidly developing and that the rules governing their construction and operation are changing. Practical Ship Design records these changes, their outcomes and the reasoning behind them. It deals with every aspect of ship design and handles a wide range of both merchant ships and naval ships with authority. It provides coverage of cargo ships and passenger ships, tugs, dredgers and other service craft. It also includes concept design, detail design, structural design, hydrodynamics design, the effect of regulations, the preparation of specifications and matters of costs and economics. Drawing on the author's extensive practical experience, Practical Ship Design is likely to interest everybody involved in the design, construction, repair and operation of ships. Students and the most experienced professionals will all benefit from the book's vast store of design data and its conclusions and recommendations.*

The World of Yesterday

An Autobiography

U of Nebraska Press Stefan Zweig (1881–1942) was a poet, novelist, and dramatist, but it was his biographies that expressed his full genius, recreating for his international audience the Elizabethan age, the French Revolution, the great days of voyages and discoveries. In this autobiography he holds the mirror up to his own age, telling the story of a generation that "was loaded down with a burden of fate as was hardly any other in the course of history." Zweig attracted to himself the best minds and loftiest souls of his era: Freud, Yeats, Borgese, Pirandello, Gorky, Ravel, Joyce, Toscanini, Jane Addams, Anatole France, and Romain Rolland are but a few of the friends he writes about.

A History of Collective Living

Models of Shared Living

Birkhäuser The book tells the story of communal living from about 1850 until today. Three motives of sharing - the economic, political and social intention - divide the residential objects, which are investigated in a historical analysis and allocated to nine development phases. The author investigates and compares different forms of housing and the way they developed from their origins until today; she illustrates how everyday shared living and the degrees of privacy in housing are practiced in Europe. Owing to its comprehensive documentation, the analysis of typologies, layout plans, and user and expert interviews, the book can also be considered to be a lexicon or handbook on communal living. A detailed overview that is unique in this form.

Weimar in Exile

The Antifascist Emigration in Europe and America

Verso Books A magisterial history of the artists and writers who left Weimar when the Nazis came to power In 1933 thousands of intellectuals, artists, writers, militants and other opponents of the Nazi regime fled Germany. They were, in the words of Heinrich Mann, "the best of Germany," refusing to remain citizens in this new state that legalized terror and brutality. Exiled across the world, they expressed the fight against Nazism in prose, poetry, painting, architecture, film and theater. *Weimar in Exile* follows these lives, from the rise of national socialism to the return to their ruined homeland, retracing their stories, struggles, setbacks and rare victories. The dignity in exile of Walter Benjamin, Ernst Bloch, Bertolt Brecht, Alfred Doblin, Hans Eisler, Heinrich Mann, Thomas Mann, Anna Seghers, Ernst Toller, Stefan Zweig and many others provides counterpoint to the story of Germany under the Nazis.

Climate Change and Tourism

Responding to Global Challenges

UNEP/Earthprint This publication contains the key proceedings and technical report of the Second International Conference on Climate Change and Tourism, held in Davos, Switzerland, 1-3 October 2007. The Davos Declaration and the summary of the conference debates demonstrate a clear commitment of the tourism sector to address climate change issues, and provide concrete recommendations for actions. The extensive technical report included in this publication was commissioned to an international team of experts by the World Tourism Organization (UNWTO), the United Nations Environment Programme (UNEP) and the World Meteorological Organization (WMO). It provides a synthesis of the state of knowledge about current and future likely impacts of climate change on tourism destinations around the world, possible implications for tourist demand, current levels and trends in GHG emissions from the tourism sector, and an overview of policy and management responses adopted by the key stakeholder groups (international organizations, public administrations, the tourism industry) with respect to adaptation to and mitigation of climate change. This publication is principally aimed at the tourism industry and government organizations at the different levels, who will have the primary responsibility of developing mitigation and adaptation strategies to respond to the challenges that global climate change will bring to the tourism sector. It also constitutes an important tool for international agencies, nongovernmental organizations (NGOs) and financial institutions.

Guide to Hydrothermal Spa Development Standards

Global Wellness Institute The *Guide to Hydrothermal Spa Development Standards* is published by the Global Wellness Institute and was created to provide design and building guidelines for hydrothermal areas (also known as "wet areas") in spas and private residences. Hydrothermal bathing (including saunas, hamams, steam rooms, hydrotherapy pools, etc.), with its benefits of cleansing, detoxifying and improving the immune system, dates back thousands of years and is one of the most ancient spa practices. The goal of this guide is to provide readers - whether they be spa owners, consultants, developers, interior designers, architects, builders, professors, students or anyone embarking on the study or build of a hydrothermal facility - with a consistent and effective means to approach the planning and construction of these unique areas and to avoid common, costly mistakes.

From weather observations to atmospheric and climate sciences in Switzerland

Celebrating 100 years of the Swiss Society for Meteorology

vdf Hochschulverlag AG In 2016 the Swiss Society for Meteorology (*Schweizerische Gesellschaft für Meteorologie, SGM*) celebrates its 100th anniversary. Compared to other meteorological societies it is not among the oldest ones. Nevertheless, meteorology has gone through such a remarkable evolution in the past 100 years that it is worthwhile to take a look back and recapitulate the developments of both science and SGM - and to reveal their interaction. The idea of this book is to give an overview of what has happened in the field of atmospheric sciences in Switzerland since the first systematic long-

term meteorological observations until today.

Intertidal Ecology

Springer Science & Business Media *The seashore has long been the subject of fascination and study - the Ancient Greek scholar Aristotle made observations and wrote about Mediterranean sea urchins. The considerable knowledge of what to eat and where it could be found has been passed down since prehistoric times by oral tradition in many societies - in Britain it is still unwise to eat shellfish in months without an 'r' in them. Over the last three hundred years or so we have seen the formalization of science and this of course has touched intertidal ecology. Linnaeus classified specimens collected from the seashore and many common species (*Patella vulgata* L. , *Mytilus edulis* L. , *Littorina littorea* (L.)) bear his imprint because he formally described, named and catalogued them. Early natural historians described zonation patterns in the first part of the 19th century (Audouin and Milne-Edwards, 1832), and the Victorians became avid admirers and collectors of shore animals and plants with the advent of the new fashion of seaside holidays (Gosse, 1856; Kingsley, 1856). As science became professionalized towards the end of the century, marine biologists took advantage of low tides to gain easy access to marine life for taxonomic work and classical studies of functional morphology. The first serious studies of the ecology of the shore were made at this time (e. g.*

Open Tourism

Open Innovation, Crowdsourcing and Co-Creation Challenging the Tourism Industry

Springer *This book examines the concepts of open innovation, crowdsourcing and co-creation from a holistic point of view and analyzes them considering their suitability to the tourism industry. Methods, theories and models are discussed and examined regarding their practical applicability in tourism. The book illustrates the theoretical mechanisms and principles of Open Innovation, Crowdsourcing and Co-creation with case studies and best practices examples. In addition to the scientific target group, the book is a useful resource for managers of the entire tourism industry. First, the book presents the theoretical fundamentals and concepts in 11 specific chapters. This basis is then enriched by three parts with case studies, focusing on information, creation and provision respectively. Finally in a concluding part the editors sum up the book and give an outlook on the implications, learnings and future perspectives of open innovation, crowdsourcing and collaborative consumption in the tourism industry.*

Wine Tourism Destination Management and Marketing

Theory and Cases

Springer *The book provides a holistic approach to wine destination management and marketing by bringing together wine tourism research with research in wine and destination management. Chapters are contributed by numerous international authors offering an international and multidisciplinary perspective. The book combines fresh research approaches with international industry examples and case studies in the following key topics: understanding demand of wine destinations; New approaches and practices of wine destination marketing; innovation and design of wine destination experiences and wine routes; planning and development of wine destinations. The book analyses wine destination management and marketing issues from the perspectives of the various stakeholders of wine destinations (e.g. tourists, cellar doors, wine tourism firms, destination managers, wine associations and networks). The book is equally valuable to researchers and industry professionals alike.*

Mr. Standfast

The Floating Press *World War I espionage thriller meets modern-day morality tale in Mr. Standfast, the third of five Richard Hannay novels written by acclaimed storyteller John Buchan. Follow Hannay's exploits as a soldier and a spy in a fast-paced book that echoes many of the themes and motifs of John Bunyan's The Pilgrim's Progress.*

The Engineering Approach to Winter Sports

Springer *The Engineering Approach to Winter Sports presents the state-of-the-art research in the field of winter sports in a harmonized and comprehensive way for a diverse audience of engineers, equipment and facilities designers, and materials scientists. The book examines the physics and chemistry of snow and ice with particular focus on the interaction (friction) between sports equipment and snow/ice, how it is influenced by environmental factors, such as temperature and pressure, as well as by contaminants and how it can be modified through the use of ski waxes or the microtextures of blades or ski soles. The authors also cover, in turn, the different disciplines in winter sports: skiing (both alpine and cross country), skating and jumping, bob sledding and skeleton, hockey and curling, with attention given to both equipment design and on the simulation of gesture and track optimization.*

Remote Sensing and GIS Integration: Theories, Methods, and Applications

Theory, Methods, and Applications

McGraw Hill Professional *Maximize a geographical information tool by incorporating it with up-to-date remotely sensed data GIS is predominantly a data-handling technology, while remote sensing is a data retrieval and analysis technology. This book addresses the need to combine remotely sensed data with cartographic, socioeconomic, and environmental data and GIS functionalities. Remote Sensing and GIS Integration begins with theoretical discussions, followed by a series of application areas in urban and environmental studies that employ the integration of remote sensing and GIS. Each application area is examined through analysis of state-of-the-art methods and detailed presentations of one or more case studies.*

Tourism and Climate Change

Risks and Opportunities

Multilingual Matters *This book discusses the tourism-climate system and provides a sound basis for those interested in tourism management and climate change mitigation, adaptation and policy. In the first three chapters, the book provides a general overview of the relationships between tourism and climate change and illustrates the complexity in four case studies that are relevant to the wide audience of tourism stakeholders. In the following seven chapters detailed discussion of the tourism and climate systems, greenhouse gas accounting for tourism, mitigation, climate risk management and comprehensive tourism-climate policies are provided. This book compiles and critically analyses the latest knowledge in this field of research and seeks to make it accessible to tourism practitioners and other stakeholders involved in tourism or climate change.*

Housing Estates in the Berlin Modern Style

The ABC's of Science

Springer Nature *Science, with its inherent tension between the known and the unknown, is an inexhaustible mine of great stories. Collected here are twenty-six among the most enchanting tales, one for each letter of the alphabet: the main characters are scientists of the highest caliber most of whom, however, are unknown to the general public. This book goes from A to Z. The letter A stands for Abel, the great Norwegian mathematician, here involved in an elliptic thriller about a fundamental theorem of mathematics, while the letter Z refers to Absolute Zero, the ultimate and lowest temperature limit, - 273,15 degrees Celsius, a value that is tremendously cooler than the most remote corner of the Universe: the race to reach this final outpost of coldness is not yet complete, but, similarly to the history books of polar explorations at the beginning of the 20th century, its pages record successes, failures, fierce rivalries and tragic desperations. In between the A and the Z, the other letters of the alphabet are similar to the various stages of a very fascinating journey along the paths of science, a journey in the company of a very unique set of characters as eccentric and peculiar as those in Ulysses by James Joyce: the French astronomer who lost everything, even his mind, to chase the transits of Venus; the caustic Austrian scientist who, perfectly at ease with both the laws of psychoanalysis and quantum mechanics, revealed the hidden secrets of dreams and the periodic table of chemical elements; the young Indian astrophysicist who was the first to understand how a star dies, suffering the ferocious opposition of his mentor for this discovery. Or the Hungarian physicist who struggled with his melancholy in the shadows of the desert of Los Alamos; or the French scholar who was forced to hide her femininity behind a false identity so as to publish fundamental theorems on prime numbers. And so on and so forth. Twenty-six stories, which reveal the most authentic atmosphere of science and the lives of some of its main players: each story can be read in quite a short period of time -- basically the time it takes to get on and off the train between two metro stations. Largely independent from one another, these twenty-six stories make the book a harmonious polyphony of several voices: the reader can invent his/her own very personal order for the chapters simply by ordering the sequence of letters differently. For an elementary law of Mathematics, this can give rise to an astronomically large number of possible books -- all the same, but - then again - all different. This book is therefore the ideal companion for an infinite number of real or metaphoric journeys.*

Ingle's Endodontics

PMPH USA *Ingle's Endodontics, 7th edition, is the most recent revision of the text that has been known as the "Bible of Endodontics" for half a century. The new edition, published in two volumes, continues the tradition of including the expertise of international leaders in the field. Eighty-six authors contributed cutting-edge knowledge and updates on topics that have formed the core of this book for years. New chapters reflect the ways in which the field of endodontics has evolved over the 50 years since the pioneer John I. Ingle authored Endodontics. Ingle's Endodontics will continue to be the standard against which all other endodontic texts will be measured. The 40 chapters are arranged in two volumes under three sections: The Science of Endodontics; The Practice of Endodontics: Diagnosis, Clinical Decision Making, Management, Prognosis; and Interdisciplinary Endodontics. With contributions from the world's experts in all phases of the specialty, Ingle's Endodontics, 7th edition promises to be an indispensable dentistry textbook, an essential part of every endodontist's library.*

How Christian Is Our Present Day Theology?

A&C Black *This book is a translation of Overbeck's famous text, Ueber die Christlichkeit unserer heutigen Theologie (1873, second edition 1903), together with an introduction and notes. The complete original work is translated, including the Introduction and Epilogue, which incorporates some of Overbeck's late reflections on his friendship with Nietzsche and on theology. The unique feature of this book is that it is the first translation into English of any substantial publication by Overbeck. This is also the only work of a programmatic nature that Overbeck ever published on the vexed issue of theology's relationship to Christianity. It raises questions about Christianity in the modern world and the role of theology within religion that still need to be answered. As David Tracy has written, "Overbeck's friend Nietzsche used a hammer against theology; Overbeck himself used a scalpel. And Overbeck is finally the deeper challenge for theology." This translation will make Overbeck's classic work available to a wider public, and thus contribute to a better appreciation of his profound and still unanswered questions for contemporary Christianity.*

Studies in Slang

Peter Lang Pub Incorporated *The Studies in Slang monographs are a forum for the detailed discussion of slang items, an activity of worth both in itself and for the insight it can bring to broader issues in linguistics; we deal here in particular with the study of language in its social context.*

Service Marketing

SAGE Publications Limited *With the rise in deregulated service-based economies in developed countries over the last forty years, an understanding of the marketing of services is essential to the marketing student, researcher, and practitioner. This four-volume collection is structured around the evolution of services marketing scholarship from 1970 to the present, giving an unprecedented, detailed account of the relationship between the theory and practice of services marketing and the changing social, economic, and technical environments over time. Each volume takes a distinct time period and theme as its subject. Volumes one to three offer the last word on services marketing research of the 20th century, with volume four looking towards a unified marketing approach for the current century.*

The Pope of Physics

Enrico Fermi and the Birth of the Atomic Age

Picador Enrico Fermi is unquestionably among the greats of the world's physicists, the most famous Italian scientist since Galileo. Called the Pope by his peers, he was regarded as infallible in his instincts and research. His discoveries changed our world; they led to weapons of mass destruction and conversely to life-saving medical interventions. This unassuming man struggled with issues relevant today, such as the threat of nuclear annihilation and the relationship of science to politics. Fleeing Fascism and anti-Semitism, Fermi became a leading figure in America's most secret project: building the atomic bomb. The last physicist who mastered all branches of the discipline, Fermi was a rare mixture of theorist and experimentalist. His rich legacy encompasses key advances in fields as diverse as comic rays, nuclear technology, and early computers. In their revealing book, Gino Segrè and Bettina Hoerlin bring this scientific visionary to life. An examination of the human dramas that touched Fermi's life as well as a thrilling history of scientific innovation in the twentieth century, this is the comprehensive biography that Fermi deserves.
