SUSTAINABLE DEVELOPMENT POLICY DIRECTORY

[John Wiley & Sons](#) This Directory means that a whole range of built environment professionals need never be caught out by the perversities of policy - in its formulation or on its journey into the real life of you and me. To have in one place the means of not only burrowing down into any one policy, but also of exploring the interconnections is a precious resource for any professional - 'sustainability literate' or not. Today, nobody who delivers our built environment can be excused from taking responsibility for the future. Armed with this Directory their contribution can only be made more effective. Sara Parkin OBE Forum for the Future This desk-top reference on sustainable development provides essential information for all who need to be up-to-date and familiar with the implications of the legal, fiscal and planning frameworks around the global and local sustainability agenda. It is relevant to a range of organisations and individuals - from national and local authorities, professional bodies, built environment professions, academia, environmental consultancies, non-governmental organisations and others. Carefully designed to facilitate access for a diverse range of stakeholders, it covers international, European, British and local policies in key built environment themes, and develops their inter-relationship to sustainable development. The Directory addresses each theme in a series of tables which summarise the policy purpose and also provide web-links to view the specific policy documents. The themes covered are: · Biodiversity · Climate Change · Construction · Energy · Environment · Planning · Pollution · Social Issues · Sustainable Development Policy and Practice · Transport · Urban Development · Waste Management · Water Other books of interest: The Green Guide to Specification Anderson ISBN: 1405119616 Smart & Sustainable Built Environments Yang Hardback ISBN: 1405124229 Sustainable Property Development Keeping Paperback ISBN: 0632058048 Previously Developed Land Syms Paperback 1405106972 Evaluating Sustainable Development Brandon 0632064862 Cover design by Garth Stewart www.thatconstructionsite.com

HIGHER ORDER QCD CORRECTIONS TO SINGLE TOP QUARK PRODUCTION

[disserta Verlag](#) It is known that the LHC has a considerable discovery potential because of its large centre-of-mass energy ($\sqrt{s} = 14$ TeV) and the high design luminosity. In addition, the two experiments ATLAS and CMS perform precision measurements for numerous models in physics. The increasing experimental precision demands an even higher level of accuracy on the theoretical side. For a more precise prediction of outcomes, one has to consider the corrections obtained typically from Quantum Chromodynamics (QCD). The calculation of these corrections in the high energy regime is described by perturbation theory. In the present study, multi-loop calculations in QCD, including in particular two-loop corrections for single top quark production, are considered. There are several phenomenological motivations to study single top quark production: Firstly, the process is sensitive to the electroweak Wtb -vertex; moreover, non-standard couplings can hint at physics beyond the Standard Model. Secondly, the t -channel cross section measurement provides information on the b -quark Parton Distribution Functions (PDF). Finally, single top quark production enables us to directly measure the Cabibbo-Kobayashi-Maskawa (CKM) matrix element V_{tb} . The next-to-next-to-leading-order (NNLO) calculation of the single top quark production has many building blocks. In this study, two blocks will be presented: one-loop corrections squared and two-loop corrections interfered with Born. Initially, the one-loop squared contribution at NNLO for single top quark production will be calculated. Before we begin with the calculation of the two-loop corrections to single top quark production, we calculate the QCD form factors of heavy quarks at NNLO, along with the axial vector coupling as a first independent check. A comparison with the relevant literature suggests that this approach is in line with generally accepted procedure. This consistency check provides a proof of the validity of our setup. In the next step, the two-loop corrections to single top quark production will be calculated. After reducing all occurring tensor integrals to scalar integrals, we apply the integration by parts method (IBP) to find the master integrals. This step is a major challenge compared to all similar calculations because of the number of variables in the problem (two Mandelstam variables s and t , the dimension d and the mass of the top quark m_t as well as the mass of the W boson m_W). Finally, the calculation of the three kinds of topologies - vertex corrections, double boxes and non-planar double boxes - in the two-loop contribution at NNLO calculation will be presented.

COCHRANE HANDBOOK FOR SYSTEMATIC REVIEWS OF INTERVENTIONS

[Wiley](#) Healthcare providers, consumers, researchers and policy makers are inundated with unmanageable amounts of information, including evidence from healthcare research. It has become impossible for all to have the time and resources to find, appraise and interpret this evidence and incorporate it into healthcare decisions. Cochrane Reviews respond to this challenge by identifying, appraising and synthesizing research-based evidence and presenting it in a standardized format, published in The Cochrane Library (www.thecochranelibrary.com). The Cochrane Handbook for Systematic Reviews of Interventions contains methodological guidance for the preparation and maintenance of Cochrane intervention reviews. Written in a clear and accessible format, it is the essential manual for all those preparing, maintaining and reading Cochrane reviews. Many of the principles and methods described here are appropriate for systematic reviews applied to other types of research and to systematic reviews of interventions undertaken by others. It is hoped therefore that this book will be invaluable to all those who want to understand the role of systematic reviews, critically appraise published reviews or perform reviews themselves.

MEASUREMENT OF THE INCLUSIVE ISOLATED PROMPT PHOTON PRODUCTION CROSS SECTION AT THE TEVATRON USING THE CDF DETECTOR

In this thesis we present the measurement of the inclusive isolated prompt photon cross section with a total integrated luminosity of 2.5 fb⁻¹ of data collected with the CDF Run II detector at the Fermilab Tevatron Collider. The prompt photon cross section is a classic measurement to test perturbative QCD (pQCD) with potential to provide information on the parton distribution function (PDF), and sensitive to the presence of new physics at large photon transverse momentum. Prompt photons also constitute an irreducible background for important searches such as H → [gamma][gamma], or SUSY and extra-dimensions with energetic photons in the final state. The Tevatron at Fermilab (Batavia, U.S.A.) is currently the hadron collider that operates at the highest energies in the world. It collides protons and antiprotons with a center-of-mass energy of 1.96 TeV. The CDF and the D0 experiments are located in two of its four interaction regions. In Run I at the Tevatron, the direct photon production cross section was measured by both CDF and D0, and first results in Run II have been presented by the D0 Collaboration based on 380 pb⁻¹. Both Run I and Run II results show agreement with the theoretical predictions except for the low p_T region, where the observed and predicted shapes are different. Prompt photon production has been also extensively measured at fixed-target experiments in lower p_T ranges, showing excess of data compared to the theory, particularly at high x_T. From an experimental point of view, the study of the direct photon production has several advantages compared to QCD studies using jets. Electromagnetic calorimeters have better energy resolution than hadronic calorimeters, and the systematic uncertainty on the photon absolute energy scale is smaller. Furthermore, the determination of the photon kinematics does not require the use of jet algorithms. However, the measurements using photons require a good understanding of the background, mainly dominated by light mesons ([pi]⁰ and [eta]) which decay into two very collinear photons. Since these photons are produced within a jet, they tend to be non-isolated in most of the cases, and can be suppressed by requiring the photon candidates to be isolated in the calorimeter. In the case the hard scattered parton hadronizes leaving most of its energy to the meson, the photon produced in the decay will not be surrounded by large energy depositions. To further reduce this remaining isolated background, we present a new technique based on the isolation distribution in the calorimeter. The measured cross section is compared to next-to-leading order (NLO) pQCD calculations, which have been corrected for non-perturbative contributions. This thesis is organized as follows: we start with a brief review of QCD theory and the formalism to calculate cross sections in Chapter 2, where we also introduce the physics of prompt photon production and summarize the current status

of the prompt photon phenomenology. Chapter 3 contains a description of the Tevatron and the CDF detector. The experimental measurement is described in Chapter 4, where we provide details on the different datasets used in the measurement, the trigger, and the event selection requirements. Most of this Chapter is devoted to the explanation of the background subtraction method and the determination of the photon signal fraction. The systematic uncertainties on the measurement are evaluated in Chapter 5, while Chapter 6 discusses the final results and the comparison to the theoretical predictions. Finally, the conclusions are presented in Chapter 7.

GLOBAL TUBERCULOSIS REPORT 2013

[World Health Organization](#) This is the eighteenth global report on tuberculosis (TB) published by WHO in a series that started in 1997. It provides a comprehensive and up-to-date assessment of the TB epidemic and progress in implementing and financing TB prevention, care and control at global, regional and country levels using data reported by almost 200 countries that account for over 99% of the world's TB cases. Two years before the 2015 deadline for achievement of global TB targets, the 2013 report includes a special supplement that assesses progress towards the 2015 targets and the actions needed to accelerate towards or move beyond them. The report has 8 main chapters. The introductory chapter provides general background on TB as well as an explanation of global targets for TB control, the WHO's Stop TB Strategy that covers the period 2006-2015 and the development of

a post-2015 global TB strategy. The remaining seven chapters cover the disease burden caused by TB (incidence, prevalence, mortality); TB case notifications and treatment outcomes; drug resistance surveillance among TB patients and the programmatic response in detecting and providing treatment for multidrug-resistant TB; diagnostics and laboratory strengthening for TB; addressing the co-epidemics of TB and HIV; financing TB care and control; and research and development for new TB diagnostics, drugs and vaccines. The four annexes of the report include a thorough explanation of methods used to estimate the burden of disease caused by TB, one-page profiles for 22 high TB-burden countries, and tables of data on key indicators for all countries organised by WHO region.
