NASA SATURN V 1967-1973 (APOLLO 4 TO APOLLO 17 & SKYLAB)

Haynes Publishing UK Few launch vehicles are as iconic and distinctive as NASA's behemoth rocket, the Saturn V, and none left such a lasting impression on those who watched it ascend. Developed with the specific brief to send humans to the Moon, it pushed rocketry to new scales. Its greatest triumph is that it achieved its goal repeatedly with an enviable record of mission success. Haynes' Saturn V Manual tells the story of this magnificent and hugely powerful machine. It explains how each of the vehicle's three stages worked; Boeing's S-IC first stage with a power output as great as the UK's peak electricity consumption, North American Aviation's S-II troubled second stage, Douglas's workhorse S-IVB third stage with its instrument unit brain - as much a spacecraft as a rocket. From the decision to build it to the operation of its engines' valves and pumps, this lavishly illustrated and deeply informative book offers a deeper appreciation of the amazing Saturn V.

THE ART AND SCIENCE OF HAND READING

CLASSICAL METHODS FOR SELF-DISCOVERY THROUGH PALMISTRY

Simon and Schuster A comprehensive guide to the inner psychology revealed by the hand • Details how to interpret the entire hand--the shape of the palm and fingers, mounts, lines, fingerprints, flexibility, nails, and skin texture • Reveals the personality archetypes, strengths, and weaknesses connected with each of the seven mounts and how the rest of the hand modifies these traits • Explains how lines change and the decisive influence of the person's own mind in healing defects found on the lines Palmistry is a science and a universal language. The hand tells a story about your talents, relationships, health, and how you feel about yourself. It reveals periods of ease or challenge in your life, and it speaks about your weaknesses and the traits you need to develop. As you change, so do your hands, reflecting the progress you have made. In this comprehensive guide to hand reading, based on Ellen Goldberg's 40 years of teaching palmistry and the Western Mystery tradition, the authors make the powerful insights of the hand accessible in an inviting and user-friendly manner. The book presents the character traits and personality archetypes associated with each of the seven mounts of the palm and shows how to determine which are most influential in the nature of the individual. The mount archetypes reveal the lifestyle, love,sex, and marriage preferences; the best career choices; and the unique strengths and weaknesses for each person. The book also examines other factors that enhance the qualities revealed by the mount types, including the flexibility of the hand, texture of the skin, and the shapes of the fingers, fingertips, and nails. The meaning of each major and minor line is described in detail as well as the influence the person's own mind has in healing defects and obstacles found on their lines. The authors also provide accurate timing guides for each line, making it possible to locate specific events and to see how your lines change over time. Presenting the hand as a guide to self-fulfillment, The Art and Science of Hand Reading incorporates correspondences to other mystical sciences such as astrology, Kabbalah, the Hermetic teachings, and archetypal psychology. It also includes practical examples and more than 600 illustrations to show how to integrate the meanings of each part of the hand to form a complete picture of your inner psychology and your ever-changing destiny.

NASA APOLLO 11

AN INSIGHT INTO THE HARDWARE FROM THE FIRST MANNED MISSION TO LAND ON THE MOON

Haynes Publishing UK On July 20, 1969, US astronaut Neil Armstrong became the first man to walk on the moon. The Apollo 11 mission that carried him and his two fellow astronauts on their epic journey marked the successful culmination of a quest that, ironically, had begun in Nazi Germany thirty years before. This is the story of the Apollo 11 mission and the 'space hardware' that made it all possible. Author Chris Riley looks at the evolution and design of the mighty Saturn V rocket, the Command and Service Modules, and the Lunar Module. He also describes the space suits worn by the crew, with their special life support systems. Launch procedures are described, 'flying' the Saturn V, navigation, course correction 'burns', orbital rendezvous techniques, flying the LEM, moon landing, moon walk, take-off from the moon, and earth re-entry procedure. Includes performance data, fuels, biographies of Armstrong, Aldrin and Collins, Gene Kranz and Werner von Braun. Detailed appendices cover all of the Apollo missions, with full details of crews, spacecraft names and logos, mission priorities, moon landing sites, and the Lunar Rover.

ORBITAL MECHANICS FOR ENGINEERING STUDENTS

Elsevier *Orbital Mechanics for Engineering Students, Second Edition*, provides an introduction to the basic concepts of space mechanics. These include vector kinematics in three dimensions; Newton's laws of motion and gravitation; relative motion; the vector-based solution of the classical two-body problem; derivation of Kepler's equations; orbits in three dimensions; preliminary orbit determination; and orbital maneuvers. The book also covers relative motion and the two-impulse rendezvous problem; interplanetary mission design using patched conics; rigid-body dynamics used to characterize the attitude of a space vehicle; satellite attitude dynamics; and the characteristics and design of multi-stage launch vehicles. Each chapter begins with an outline of key concepts and concludes with problems that are based on the material covered. This text is written for undergraduates who are studying orbital mechanics for the first time and have completed courses in physics, dynamics, and mathematics, including differential equations and applied linear algebra. Graduate students, researchers, and experienced practitioners will also find useful review materials in the book. **NEW:** Reorganized and improved discussions of coordinate systems, new discussion on perturbations and quaternions **NEW:** Increased coverage of attitude dynamics, including new Matlab algorithms and examples in chapter 10 New examples and homework problems

NASA SATURN I/IB LAUNCH VEHICLES OWNER'S WORKSHOP MANUAL

Haynes Publishing UK The Saturn I and IB series of rockets fulfilled plans developed in the late 1950s to build a rocket which could triple the existing thrust levels of US rockets and equal the lifting capacity of the Soviet Union, launching satellites and spacecraft weighing more than 10 tonnes into Earth orbit and do it by the early 1960s. These rockets emerged from the work carried out by former V-2 technical director Wernher von Braun, working at the Army Ballistic Missile Agency in Huntsville, Alabama. Three times more powerful than anything launched by America to that date, with a cluster of eight rocket motors for the first stage, the first Saturn I flew on October 27, 1961, and propelled America into the heavy-lift business. It was the Saturn I, and its successor the Saturn IB, with a more powerful second stage, that did all the preparatory work getting NASA ready to put men on the Moon. Between 1961 and 1975, the 19 flights of the Saturn I and IB achieved several historic "firsts", launching the world's first high-energy liquid oxygen/liquid hydrogen upper stages into orbit in 1964, the first unmanned test of suborbital and orbital Apollo spacecraft in 1966, the first unmanned test of the Lunar Module in 1968, the first manned Apollo spacecraft Apollo 7 also in 1968, all three Skylab flights in 1973 and the last Apollo spacecraft flown in support of the Apollo-Soyuz Test Project in 1975.

REINFORCEMENT LEARNING, SECOND EDITION

AN INTRODUCTION

MIT Press The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In *Reinforcement Learning*, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

CHAUCER AND PAGAN ANTIQUITY

Boydell & Brewer Ltd Professor Minnis argues that the paganism in Troilus and Criseyde and The Knight's Tale is not simply a backdrop but must be central to our understanding of the texts. Chaucer's two great pagan poems, Troilus and Criseyde and The Knight's Tale, belong to the literary genre known as the 'romance of antiquity' (which first appeared in the mid 12th century), in which the ancient pagan world is shown on its own terms, without the blatant Christian bias against paganism characteristic of works like the Chanson de Roland, where the writer is concerned with present-day rather than classical forms of paganism. Chaucer's attitudes to antiquity were influenced, but not determined, by those found in the compilations, commentaries, mythographies and history books which we know that he knew. These sources illuminate the manner in which he transformed Boccaccio. Much modern criticism has concentrated on the medieval veneer of manners and fashions which are ascribed to the heathen protagonists of Troilus and The Knight's Tale; Dr Minnis examines the other side of the coin, Chaucer's historical interest in cultures very different from his own. The paganism in these poems is not mere background and setting, but an essential part of their overall meaning.
