## Event Information Systems

### A Process and Data Reference Model for Event Management

*Logos Verlag Berlin GmbH* Events are an essential element of society. Advancing digital technologies and the ongoing globalization has put forward a variety of different business, leisure, or scientific events that need to be managed in order to take place. As a result of the proliferation of digital technology, IT systems are an indispensable part of this management process. Amid this pandemic crisis, these systems have become increasingly important due to the relocation of events into the virtual sphere. Since every event entails different requirements, event management systems need to be very flexible. In contrast to other application systems, this flexibility is needed during use as the requirements of future events are not known during the initial selection and roll-out of the software. This calls for an intensified dialogue between the business and IT to match technical possibilities with practical requirements. Currently, adequate means to support this dialogue are lacking. To this end, this dissertation presents a reference model that encompasses the essential processes and data structures in the domain. In 36 application cases, the reference model is instantiated and evaluated. Practitioners and researchers are the intended audiences of this work. Researchers may use it as a foundation to design novel IT artifacts in the domain. Practitioners benefit from the first comprehensive tool to support the design and use of digital technology in event management.

### Strengthening Forensic Science in the United States

### A Path Forward

*National Academies Press* Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. **Strengthening Forensic Science in the United States: A Path Forward** provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. **Strengthening Forensic Science in the United States** gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

## Standardization in Smart Grids

## Introduction to IT-Related Methodologies, Architectures and Standards

*Springer Science & Business Media* The first successful finished Smart Grid Prototype Projects deliver new requirements and best practices to meet them. These solutions will be the base for the upcoming norms and standards in the near future. This domain is not only part of one Standard developing Organization (SDO), but also of many different organizations like ITU, ISO, IEC and additionally for the electro mobility part the SAE. This results in many standards which are based on different aspects. Furthermore the European mirror organizations (ETSI, CEN, CENELEC) as well as the German mirror groups of these groups are involved, which are delivering further rules and adaption for the local market. Because of this diversity of organizations involved, it is difficult for the local companies (which includes energy utility, manufacturer and software producer specialized on integration) to identify the relevant trends, standardization groups and technologies necessary. With the EU Mandate M490 to CEN/CNELEC and TESI and the Commission being a driving force (e.g. <ftp://ftp.cenelec.eu/CENELEC/Smartgrid/SmartGridFinalReport.pdf> and <http://www.cenelec.eu/aboutcenelec/whatwedo/technologysectors/smartgrids.html>) standardization becomes more and more important - but it's complex and not easy to be understood. Here at OFFIS, we provide training but we are always asked for textbooks on our trainings. Based on our modules for the SG trainings, we would estimate the following chapters to be relevant to SG stakeholders in standardization (roughly 16-20 pages per chapter).

## Impact and the Management Researcher

*Routledge* Universities, governments, faculty-evaluation committees, grant-bestowing institutions, scholars, and accreditation organizations have increasingly insisted on identifying and placing value on research impact. Valuation of research and scholarly output predicts innovation, affects careers, and guides resource allocations worldwide. This book joins the burgeoning conversation in management and the social sciences with theoretical and applied discussions of the concepts, measurements, costs and benefits that accrue to pursuing scholarly impact. The author draws on a pioneering study by the Academy of Management that asked its global membership of 20,000 how they assessed scholarly impact, including rankings and impact factors, and how institutions supported this pursuit. Through qualitative and quantitative cross-country analysis by professorial rank, geographical region and support for various metrics, as well as exploration of parallel discussions in the social and hard sciences, the author argues for an urgent re-examination of the visible and invisible hands of research evaluation that shape lives and global societies. The book presents original data on the external impacts of management research on policy, through the media, and in interest displayed by constituencies, which will make the book of interest to researchers, academics and students in the fields of business and management. Recommendations from leading management scholars and from the data follow for more valid, more reliable and less cynical metrics of research impact.

## Importing Into the United States

### A Guide for Commercial Importers

This edition of Importing Into the United States contains material pursuant to the Trade Act of 2002 and the Customs Modernization Act, commonly referred to as the Mod Act. Importing Into the United States provides wide-ranging information about the importing process and import requirements. Also, this publication does not supersede or modify any provision of those laws and

regulations. Legislative and administrative changes are always under consideration and can occur at any time. Quota limitations on commodities are also subject to change. Therefore, reliance solely on the information in this book may not meet the "reasonable care" standard required of importers.

## The Future of Nursing

### Leading Change, Advancing Health

*National Academies Press* **The Future of Nursing** explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
