KEY=WELDING - MAXIMILIAN CHACE

The Machine Gunners

Nelson Thornes It's 1940, and Britain is at war. Young Chas McGill has the second-best collection of war souvenirs in town, but desperately wants it to be the best. Amidst the bombs and air raids, Chas and his friends plan their own war effort in their newly built bunker. Friendships are forged and loyalties tested, in the adventure of a lifetime. Robert Westall's "The Machine Gunners" has been read, studied - and loved - by successive generations of younger readers. It won the Carnegie Medal and was voted one of the most important children's novels of the past seventy years. This thrilling stage adaptation comes from the award-winning playwright Ali Taylor, and premiered at the Polka Theatre, London. It provides rich opportunities for discussion in the classroom, and for staging by schools, youth theatres and amateur companies.

The Psychic Life of Power

Theories in Subjection

Stanford University Press Judith Butler's new book considers the way in which psychic life is generated by the social operation of power, and how that social operation of power is concealed and fortified by the psyche that it produces. It combines social theory, philosophy, and psychoanalysis in novel ways, and offers a more sustained analysis of the theory of subject formation implicit in her previous books.

Virus Taxonomy

Classification and Nomenclature of Viruses : Ninth Report of the International

Committee on Taxonomy of Viruses

Elsevier The practical need to partition the world of viruses into distinguishable, universally agreed upon entities is the ultimate justification for developing a virus classification system. Since 1971, the International Committee on Taxonomy of Viruses (ICTV) operating on behalf of the world community of virologists has taken on the task of developing a single, universal taxonomic scheme for all viruses infecting animals (vertebrate, invertebrates, and protozoa), plants (higher plants and algae), fungi, bacteria, and archaea. The current report builds on the accumulated taxonomic construction of the eight previous reports dating back to 1971 and records the proceedings of the Committee since publication of the last report in 2005. Representing the work of more than 500 virologists worldwide, this report is the authoritative reference for virus organization, distinction, and structure.

The text in this edition has been completely revised, incorporating new treatment options and an extensive list of new compatibility data. This book serves as a valuable reference source, providing comprehensive review of syringe driver use and administration of drugs by CSCI. The first chapter provides an overview of syringe drivers and CSCIs, including a useful array of frequently asked questions. The second chapter provides information about the chemistry of drug incompatibility and degradation. The third chapter comprises revised and referenced information relating to most drugs likely to be administered by CSCI using a syringe driver. The fourth chapter discusses the control of specific symptoms that are often encountered when CSCIs are required. The fifth and final chapter contains an extensive, referenced list of compatibility and stability data relating to drug combinations administered by CSCI.

Proofs and Refutations

The Logic of Mathematical Discovery

Cambridge University Press Imre Lakatos's Proofs and Refutations is an enduring classic, which has never lost its relevance. Taking the form of a dialogue between a teacher and some students, the book considers various solutions to mathematical problems and, in the process, raises important questions about the nature of mathematical discovery and methodology. Lakatos shows that mathematics grows through a process of improvement by attempts at proofs and critiques of these attempts, and his work continues to inspire mathematicians and philosophers aspiring to develop a philosophy of mathematics that accounts for both the static and the dynamic complexity of mathematical practice. With a specially commissioned Preface written by Paolo Mancosu, this book has been revived for a new generation of readers.

Introduction to Statistical Modelling

Springer This book is about generalized linear models as described by Nelder and Wedderburn (1972). This approach provides a unified theoretical and computational framework for the most commonly used statistical methods: regression, analysis of variance and covariance, logistic regression, log-linear models for contingency tables and several more specialized techniques. More advanced expositions

of the subject are given by McCullagh and Nelder (1983) and Andersen (1980). The emphasis is on the use of statistical models to investigate substantive questions rather than to produce mathematical descriptions of the data. Therefore parameter estimation and hypothesis testing are stressed. I have assumed that the reader is familiar with the most commonly used statistical concepts and methods and has some basic knowledge of calculus and matrix algebra. Short numerical examples are used to illustrate the main points. In writing this book I have been helped greatly by the comments and criticism of my students and colleagues, especially Anne Young. However, the choice of material, and the obscurities and errors are my responsibility and I apologize to the reader for any irritation caused by them. For typing the manuscript under difficult conditions I am grateful to Anne McKim, Jan Garnsey, Cath Claydon and Julie Latimer.

Social Psychology and the Unconscious

The Automaticity of Higher Mental Processes

Psychology Press Evidence is mounting that we are not as in control of our judgments and behavior as we think we are. Unconscious or 'automatic' forms of psychological and behavioral processes are those of which we tend to be unaware, that occur without our intention or consent, yet influence us on a daily basis in profound ways. Automatic processes influence our likes and dislikes for almost everything, as well as how we perceive other people, such as when we make stereotypic assumptions about someone based on their race or gender or social class. Even more strikingly, the latest research

is showing that the aspects of life that are the richest experience and most important to us - such as emotions and our close relationships, as well as the pursuit of our important life tasks and goals - also have substantial unconscious components. Social Psychology and the Unconscious: The Automaticity of Higher Mental Processes offers a state-of-the-art review of the evidence and theory supporting the existence and the significance of automatic processes in our daily lives, with chapters by the leading researchers in this field today, across a spectrum of psychological phenomena from emotions and motivations to social judgment and behavior. The volume provides an introduction and overview of these now central topics to graduate students and researchers in social psychology and a range of allied disciplines with an interest in human behavior and the unconscious, such as cognitive psychology, philosophy of mind, political science, and business.
