KEY=P - BRIGGS HUNTER

Handbook of Forensic Anthropology and Archaeology *Routledge* With contributions from 70 experienced practitioners from around the world, this second edition of the authoritative Handbook of Forensic Archaeology and Anthropology provides a solid foundation in both the practical and ethical components of forensic work. The book weaves together the discipline's historical development; current field methods for analyzing crime, natural disasters, and human atrocities; an array of laboratory techniques; key case studies involving legal, professional, and ethical issues; and ideas about the future of forensic work--all from a global perspective. This fully revised second edition expands the geographic representation of the first edition by including chapters from practitioners in South Africa and Colombia, and adds exciting new chapters on the International Commission on Missing Persons and on forensic work being done to identify victims of the Battle of Fromelles during World War I. The Handbook of Forensic Anthropology and Archaeology provides an updated perspective of the disciplines of forensic archaeology and anthropology. **Handbook of Fruit Science and Technology Production, Composition, Storage, and Processing** *CRC Press* This work offers comprehensive, current coverage of preharvest and postharvest handling and production of fruits grown in tropical, subtropical and temperate regions throughout the world. It discusses over 60 major and minor crops, and details developments in fruit handling and disease control, storage practices, packaging for fruit protection, sizing equipment, conveyors, package fillers, refrigeration methods and more. **Respect for Nature A Theory of Environmental Ethics - 25th Anniversary Edition** *Princeton University Press* What rational justification is there for conceiving of all living things as possessing inherent worth? In *Respect for Nature*, Paul Taylor draws on biology, moral philosophy, and environmental science to defend a biocentric environmental ethic in which all life has value. Without making claims for the moral rights of plants and animals, he offers a reasoned alternative to the prevailing anthropocentric view--that the natural environment and its wildlife are valued only as objects for human use or enjoyment. *Respect for Nature* provides both a full account of the biological conditions for life--human or otherwise--and a comprehensive view of the complex relationship between human beings and the whole of nature. This classic book remains a valuable resource for philosophers, biologists, and environmentalists alike--along with all those who care about the future of life on Earth. A new foreword by Dale Jamieson looks at how the original 1986 edition of *Respect for Nature* has shaped the study of environmental ethics, and shows why the work remains relevant to debates today. **Recovery, Analysis, and Identification of Commingled Human Remains** *Springer Science & Business Media* Commingling of human remains presents an added challenge to all phases of the forensic process. This book brings together tools from diverse sources within forensic science to offer a set of comprehensive approaches to handling commingled remains. It details the recovery of commingled remains in the field, the use of triage in the assessment of commingling, various analytical techniques for sorting and determining the number of individuals, the role of DNA in the overall process, ethical considerations, and data management. In addition, the book includes case examples that illustrate techniques found to be successful and those that proved problematic. **In Oldenburg's Long Shadow Librarians, Research Scientists, Publishers, and the Control of Scientific Publishing** *Association of Research Librarians* New directions in corpus-based translation studies *Language Science Press* Corpus-based translation studies has become a major paradigm and research methodology and has investigated a wide variety of topics in the last two decades. The contributions to this volume add to the range of corpus-based studies by providing examples of some less explored applications of corpus analysis methods to translation research. They show that the area keeps evolving as it constantly opens up to different frameworks and approaches, from appraisal theory to process-oriented analysis, and encompasses multiple translation settings, including (indirect) literary translation, machine (assisted)-translation and the practical work of professional legal translators. The studies included in the volume also expand the range of application of corpus applications in terms of the tools used to accomplish the research tasks outlined. **Handbook of Landscape Archaeology** *Routledge* Over the past three decades, "landscape" has become an umbrella term to describe many different strands of archaeology. From the processualist study of settlement patterns to the phenomenologist's experience of the natural world, from human impact on past environments to the environment's impact on human thought, action, and interaction, the term has been used. In this volume, for the first time, over 80 archaeologists from three continents attempt a comprehensive definition of the ideas and practices of landscape archaeology, covering the theoretical and the practical, the research and conservation, and encasing the term in a global framework. As a basic reference volume for landscape archaeology, this volume will be the benchmark for decades to come. All royalties on this Handbook are donated to the World Archaeological Congress. **Breaking Ground in Corpus-based Interpreting Studies** *Peter Lang Pub Incorporated* This book focuses on interpretation corpora which is one of the major subjects of research in interpreting studies. It explores key issues such as corpus design and representativeness, as well as aims and challenges of the application of corpus-linguistics principles and methods to interpreting. Interpreting corpora represent a real challenge because of the very nature of the items they are composed of. The oral dimension, the unavoidable stage of transcription and the difficulties in relying on authentic data are only some of the aspects that make the creation of interpreting corpora a complex, challenging and time-consuming activity. The book discusses the theoretical problems and presents the working phases leading to the collection of five different interpreting corpora. The variety of approaches adopted by each research team highlights the fact that aims, interrogation methods and corpus design are intertwined. A survey of the studies carried out so far using these five interpreting corpora identifies data comparability as the core issue of corpus-based interpreting studies. **Corpus-Based Approaches to Translation and Interpreting From Theory to Applications** *Peter Lang GmbH, Internationaler Verlag Der Wissenschaften* This volume represents a collection of theoretical and application-orientated contributions which report advances in corpus-based translation and interpreting studies. The theoretical papers reflect the development of the discipline. The applied studies discuss recent results in different areas such as training, practice and the use of CAT tools **Encoded Archival Description Tag Library, Version 2002** *Society of Amer Archivists* **Retranslation Translation, Literature and Reinterpretation** *Bloomsbury Publishing* **Retranslation** is a phenomenon which gives rise to multiple translations of a particular work. But theoretical engagement with the motivations and outcomes of retranslation often falls short of acknowledging the complex nature of this repetitive process, and reasoning has so far been limited to considerations of progress, updating and challenge; there is even less in the way of empirical study. This book seeks to redress the balance through its case studies on the initial translations and retranslations of Flaubert's *Madame Bovary* and Sand's pastoral tale *La Mare au diable* within the British literary context. What emerges is a detailed exposition of how and why these works have been retold, alongside a critical re-evaluation of existing lines of enquiry into retranslation. A flexible methodology for the study of retranslations is also proposed which draws on Systemic Functional Grammar, narratology, narrative theory and genetic criticism. **The Nineteenth Century in the Prado** *T F Editores* This is effectively a historical journey through the works of the great 19th century Spanish masters from Goya through to Sorolla. **Craniofacial Identification** *Cambridge University Press* Draws together a wide range of elements relating to craniofacial analysis and identification, examining the latest advances in the field. **The English-speaking Caribbean Vernacular Latin Americanisms War, the Market, and the Making of a Discipline** *University of Pittsburgh Press* In *Vernacular Latin Americanisms*, Fernando Degiovanni offers a long-view perspective on the intense debates that shaped Latin American studies and still inform their function in the globalized and neoliberal university of today. By doing so he provides a reevaluation of a field whose epistemological and political status has obsessed its participants up until the present. The book focuses on the emergence of Latin Americanism as a field of critical debate and scholarly inquiry between the 1890s and the 1960s. Drawing on contemporary theory, intellectual history, and extensive archival research, Degiovanni explores in particular how the discourse and realities of war and capitalism have left an indelible mark on the formation of disciplinary perspectives on Latin American cultures in both the United States and Latin America. Questioning the premise that Latin Americanism as a discipline comes out of the tradition of continental identity developed by prominent intellectuals such as José Martí, José E. Rodó or José Vasconcelos, Degiovanni proposes that the scholars who established the discipline did not set out to defend Latin America as a place of uncontaminated spiritual values opposed to a utilitarian and materialist United States. Their mission was entirely different, even the opposite: giving a place to culture in the consolidation of alternative models of regional economic cooperation at moments of international armed conflict. For scholars theorizing Latin Americanism in market terms, this meant questioning nativist and cosmopolitan narratives about identity; it also meant abandoning any Bolivarian project of continental unity or of socialist internationalism. **Knowing Knowledge** *Lulu.com* Why does so much of our society look as it did in the past? Our schools,our government, our religious organizations, our media - while more complex, have maintained their general structure and shape. Classroomstructure today, with the exception of a computer or an LCD projector, looks remarkably unchanged: teacher at the front, students i n rows. Our business processes are still built on theories and viewpoints that existed over a century ago (with periodic amendments from thinkers like Drucker 2). In essence, we have transferred (not transformed) our physical identity to online spaces and structures. **Family Time The Social Organization of Care** *Psychology Press* In this volume, leading international experts in the analysis of time use explore the interface between time use and family policy. They show how social institutions limit the choices that individuals can make about how to divide their time. **Perspectives in Politics and Discourse** *John Benjamins Publishing* The volume explores the vast and heterogeneous territory of Political Linguistics, structuring and developing its concepts, themes and methodologies into combined and coherent **Analysis of Political Discourse (APD)**. Dealing with an extensive and representative variety of topics and domains - political rhetoric, mediatized communication, ideology, politics of language choice, etc. - it offers uniquely systematic,

theoretically grounded insights in how language is used to perform power-enforcing/imbuing practices in social interaction, and how it is deployed for communicating decisions concerning language itself. The twenty chapters in the volume, written by specialists in political linguistics, (critical) discourse analysis, pragmatics, sociolinguistics, and social psychology, address the diversity of political discourse to propose novel perspectives from which common analytic procedures can be drawn and followed. The volume is thus an essential resource for anyone looking for a coherent research agenda in explorations of political discourse as a point of reference for their own academic activities, both scholarly and didactic. "Politics in today's world consists of almost continuous interconnected talking and writing in a constantly expanding media universe. This comprehensive collection of papers edited by Urszula Okulska and Piotr Cap helps readers to get a hold on the flow of discourse that constitutes politics today. Indispensible for anyone seeking perspectives for understanding the language of politics and research methods for probing beyond the surface." *New Insights into Arabic Translation and Interpreting Multilingual Matters* This book addresses translation and interpreting with Arabic either as a source or target language. It focuses on new fields of study and professional practice, such as community translation and interpreting, and offers fresh insights into the relationship between culture, translation and interpreting. Chapters discuss issues relating specifically to Arabic and the Arab cultural context and contribute views, research findings and applications that come from a language combination and a cultural background quite different from traditional Eurocentric theoretical and professional positions. This volume is a significant addition to resources on Arabic translation and interpreting and contributes fresh perspectives to translation studies in general. Based upon research by Drs. Steven B. Leder and Debra M. Suiter, an easily administered, reliable and validated swallow screening protocol was developed and can be used by speech-language pathologists, nurses, otolaryngologists, oncologists, neurologists, intensivists and physicians assistants. In addition, the protocol can be used in a variety of environments, including acute care, rehabilitation and nursing homes. The Yale Swallow Protocol meets all of the criteria necessary for a successful screening test, including being simple to administer, cross-disciplinary, cost effective, acceptable to patients and able to identify the target attribute by giving a positive finding when aspiration risk is present and a negative finding when aspiration risk is absent. Additionally, early and accurate identification of aspiration risk can significantly reduce health-care costs associated with recognized prandial aspiration. *International Classification of Functioning, Disability, and Health Children & Youth Version : ICF-CY. Frédéric Durot, Anne Lacaton y Jean-Philippe Vassal se enfrentan a esta problemática desde una actitud novedosa y proponen su radical transformación para adaptarlas a los modos de vida actuales. 'No derribar nunca, no restar ni reemplazar nunca, sino añadir, transformar y reutilizar siempre.' Esta es la premisa en la que se basa la propuesta de los autores. A partir de un análisis de los elementos que conforman la vivienda, en un recorrido que va de dentro afuera del edificio, los autores recuperan el placer de habitar desde una actitud precisa y delicada que tiene en cuenta todas las preexistencias. Los siete proyectos que aquí se presentan son el resultado de este planteamiento, en unos casos estudios y, en otros, propuestas ganadoras de concursos de arquitectura donde se desarrollan los objetivos y las ideas planteados en los primeros.* *Neonatal Care A Compendium of AAP Clinical Practice Guidelines and Policies* This new compendium from the AAP Committee on Fetus and Newborn gives you a single place to look for the most recent recommendations on quality care of pregnant women and their newborn infants. juridical affairs. This also means a challenge for design methodology as the academic discipline that studies design processes and methods. The aim of the NATO ARW of which this book is the report was to bring together colleagues from different academic fields to discuss this increasing multidisciplinary in the relationship between design and sciences. This multidisciplinary made the conference a special event. At a certain moment one of the participants exclaimed: "This is not a traditional design methodology conference!" Throughout the conference it was evident that there was a need to develop a common language and understanding to enable the exchange of different perspectives on design and its relationship with science. The contributions that have been included in this book show these different perspectives: the philosophical, the historical, the engineering perspective and the practical designer's experience. "A trenchant exposé . . . meticulously researched and packed with documentary evidence" (Publishers Weekly), Sonia Shah's riveting journalistic account shines a much-needed spotlight on a disturbing new global trend. Drawing on years of original research and reporting in Africa and Asia, Shah examines how the multinational pharmaceutical industry, in its quest to develop lucrative drugs, has begun exporting its clinical research trials to the developing world, where ethical oversight is minimal and desperate patients abound. As the New England Journal of Medicine notes, "it is critical that those engaged in drug development, clinical research and its oversight, research ethics, and policy know about these stories," which tell of an impossible choice being faced by many of the world's poorest patients—be experimented upon or die for lack of medicine.
