INTERVIEW QUESTIONS AND ANSWERS

How2Become Ltd

MACHINE LEARNING IN INSURANCE

MDPI Machine learning is a relatively new field, without a unanimous definition. In many ways, actuaries have been machine learners. In both pricing and reserving, but also more recently in capital modelling, actuaries have combined statistical methodology with a deep understanding of the problem at hand and how any solution may affect the company and its customers. One aspect that has, perhaps, not been so well developed among actuaries is validation. Discussions among actuaries' "preferred methods" were often without solid scientific arguments, including validation of the case at hand. Through this collection, we aim to promote a good practice of machine learning in insurance, considering the following three key issues: a) who is the client, or sponsor, or otherwise interested real-life target of the study? b) The reason for working with a particular data set and a clarification of the available extra knowledge, that we also call prior knowledge, besides the data set alone. c) A mathematical statistical argument for the validation procedure.

CHARACTER STRENGTHS AND VIRTUES

A HANDBOOK AND CLASSIFICATION

Oxford University Press "Character" has become a front-and-center topic in contemporary discourse, but this term does not have a fixed meaning. Character may be simply defined by what someone does not do, but a more active and thorough definition is necessary, one that addresses certain vital questions. Is character a singular characteristic of an individual, or is it composed of different aspects? Does character--however we define it--exist in degrees, or is it simply something one happens to have? How can character be developed? Can it be learned? Relatedly, can it be taught, and who might be the most effective teacher? What roles are played by family, schools, the media, religion, and the larger culture? This groundbreaking handbook of character strengths and virtues is the first progress report from a prestigious group of researchers who have undertaken the systematic classification and measurement of widely valued positive traits. They approach good character in terms of separate strengths-authenticity, persistence, kindness, gratitude, hope, humor, and so on--each of which exists in degrees. Character Strengths and Virtues classifies twenty-four specific strengths under six broad virtues that consistently emerge across history and culture: wisdom, courage, humanity, justice, temperance, and transcendence. Each strength is thoroughly examined in its own chapter, with special attention to its meaning, explanation, measurement, causes, correlates, consequences, and development across the life span, as well as to strategies for its deliberate cultivation. This book demands the attention of anyone interested in psychology and what it can teach about the good life.

2011 SAS BASE PROGRAMMING EXAMETRIX 120 POCKET REVIEW QUESTIONS VOLUME ONE

The SAS Base Programming Exam for SAS 9 (Exam code: A00-211) covers the following 5 major topics: Accessing Data, Creating Data Structures, Managing Data, Generating Reports, Handling Errors. There are 70 multiple-choice questions in the real exam, and the candidate must answer 46 of them correctly in order to pass. The corresponding Prometric Exam ID is A00-211. The exam is pretty practical in that no data analysis theory is ever tested. The focus is on the technical side of SAS programming. There are two major types of questions you are going to encounter in the exam. With the first type of questions you will be shown some codes and you will be asked to determine the correct results produced by those codes. With the second type of questions you will be asked to determine what to do with some functions and features, why they should be used, and/or their characteristics ...etc etc. These questions often involve minor details that can have you tripped up. Ron Cody's "Learning SAS by Example: A Programmer's Guide" is arguably the best text book to use for learning the various exam topics. However, the book does not come with any practice questions (in fact, right from the beginning the book was never written for exam prep purpose). Cody's book will get you truly equipped with the skills necessary to master SAS programming and answer the first type of questions. But the lack of exam focus can make it difficult for you to get ready for the second type of questions. This is where we fill the gap - you may think of our product as the unofficial supplement to the various study text books, or you may view it as a standalone module with a focus on building up your exam readiness, THROUGH 120 UNIQUE REVIEW QUESTIONS AND ANSWERS.
