Intermediate Algebra: Connecting Concepts through Applications

Cengage Learning INTERMEDIATE ALGEBRA: CONNECTING CONCEPTS THROUGH APPLICATIONS shows students how to apply traditional mathematical skills in real-world contexts. The emphasis on skill building and applications engages students as they master concepts, problem solving, and communication skills. It modifies the rule of four, integrating algebraic techniques, graphing, the use of data in tables, and writing sentences to communicate solutions to application problems. The authors have developed several key ideas to make concepts real and vivid for students. First, the authors integrate applications, drawing on real-world data to show students why they need to know and how to apply math. The applications help students develop the skills needed to explain the meaning of answers in the context of the application. Second, they emphasize strong algebra skills. These skills support the applications and enhance student comprehension. Third, the authors use an eyeball best-fit approach to modeling. Doing models by hand helps students focus on the characteristics of each function type. Fourth, the text underscores the importance of graphs and graphing. Students learn graphing by hand, while the graphing calculator is used to display real-life data problems. In short, INTERMEDIATE ALGEBRA: CONNECTING CONCEPTS THROUGH APPLICATIONS takes an application-driven approach to algebra, using appropriate calculator technology as students master algebraic concepts and skills. Left Behind

Urban High Schools and the Failure of Market Reform

JHU Press In *Left Behind*, a team of education scholars led by Edward P. St. John argues that American cities have been engaged for the past three decades in a radical—but failing—effort to transform general and vocational high schools into college preparatory institutions. By examining the educational reforms in four urban charter schools across the United States and four public high schools in New York City, *Left Behind* reveals how educators contend with the challenge of developing new courses while providing social support for students to build college-going cultures. The research shows that district schools struggle to comply with standards that leave little room to develop advanced thematic curricula and that charter schools have not succeeded in substantially raising student test scores. Many students who start in rigorous charter schools transfer back to public schools while both public and charter schools struggle to prepare their students for college-level work. *Left Behind* provides crucial insights into the troubling trajectory of public policy while offering teachers and administrators effective strategies for overcoming barriers.
