## You're a Business Owner, Not a Dummy!

## Monetary Policy in India

## A Modern Macroeconomic Perspective

Springer This book presents research that applies contemporary monetary theory and state-of-the-art econometric methods to the analysis of the monetary and financial aspects of the Indian economy and the impact of monetary policy on economic performance. Indian monetary policy has attracted significant attention from Indian and international macroeconomists over the last several years. Interest in how monetary policy influences economic performance and how monetary policy is conducted in India is growing. The prospects for further financial sector reform and ongoing inflation in India have sparked new interest in the role of money and monetary policy in India among economists, policy makers and students alike. The book should also interest economists outside India because it studies monetary economics in a major emerging market economy and makes advances in the analysis of how financial market imperfections and structural constraints influence the effects of monetary policy.

## What is Responsible for India's Sharp Disinflation?

International Monetary Fund We analyze the dramatic decline in India's inflation over the last two years using an augmented Phillips Curve approach and quantify the role of different factors. Our results suggest that, contrary to popular perception, the direct role of lower oil prices in India's disinflation was relatively modest given the limited pass-through into domestic prices. Instead, we find that inflation is a highly persistent process in India, reflecting very adaptive expectations and the backward looking nature of wage and support price-setting. As a consequence, we find that a moderation of expectations, both backward and forward, and a rationalization of Minimum Support Prices (MSPs), explain the bulk of the disinflation over the last two years.

## Agricultural Factor Markets and India's Small Farmers

SAGE Publishing India Incompleteness and imperfections of the factor markets can inhibit farmers, particularly small farmers, from optimal utilization of resources, which limits the performance of the whole agriculture sector. In small farm agriculture, several important markets handling allocation of vital inputs and services have been emerging. Emerging markets such as the rental markets of farm machinery and equipment have received little attention in literature. Agricultural Factor Markets and India's Small Farmers argues that the market efficacy for such critical services requires close examination. The decline of public sector provided extension service in the post Green Revolution period and the entry of private providers makes this especially important. Further, thinness of markets for farm credit, insurance and marketing services deserves incisive analysis, as small farms are often constrained by insufficiency of access to such services. The book analyses different factor markets to explore their interconnectedness and presents a comprehensive study on the factor market system.

Marketed and Marketable Surplus of Major Food Grains in India

**Springer** This book helps readers understand the concepts of marketed and marketable surplus, as well as the role of the government and marketing agencies, including those in the private sector, in improving market efficiency. It also examines the impact of various socioeconomic, technological, institutional, infrastructure, and price factors on the marketed surplus of major crops. While Indian agriculture has become increasingly market-oriented and monetized, the importance of market orientation of agriculture is also being recognized at the international level. The proportion of agricultural production that is marketed by farmers has increased significantly over the last few decades in India: in the early 1950s, about 30-35 per cent of food grains output was marketed, which has now increased to more than 70 per cent. In this context, the marketed surplus is proportionately higher in the case of commercial crops than subsistence crops. Recognizing its importance, the Government of India initiated a nation-wide survey to estimate marketable surplus and post-harvest losses in the early 1970s, which continued up to the late 1990s. As Indian agriculture, has undergone significant transformation, and no reliable estimates of marketed and marketable surplus are available, the study was conducted to estimate the marketed and marketable surplus of major food crops in leading producing states, and to examine important factors which determine the level of marketed surplus for various categories of farms. The results of this study offer a valuable resource for designing effective food procurement, distribution and price policies. Further, they provide reliable estimates of household farm retention pattern for self-consumption, seed, feed, wages and other payments in kind, which can be used as the basis for planning infrastructure development of storage and distribution. This essential information can help policy-makers determine how much marketed surplus is generated by the different categories of farmers and how marketable surplus would respond to changes in diverse economic and non-economic variables, allowing them to design policies accordingly.

Pulses for Food and Nutritional Security of India

## Production, Markets and Trade

Springer Nature This book provides an in-depth analysis of India's pulses sector in terms of production, prices, markets, and trade. Pulses play a pivotal role in a developing country like India for all categories of people due to its rich protein content (double that of wheat and three times more than that of rice). Despite being an important crop from the point of view of food, nutrition, and environmental security, the focus of food security policies in developing countries has been more on wheat and rice production. This book analyses factors influencing the supply of pulses with a greater emphasis on government interventions such as minimum support price (MSP) and National Food Security Mission (NFSM), the effectiveness of MSP and factors influencing farmers' access to MSP, the import dependency implications through a detailed import pricing behavior of major importers of major pulses. It investigates production, market dynamics, and trade implications related to two major pulses, chickpea and pigeonpea, produced by all pulse-producing States in India. Analysis of farmer's awareness of MSP and factors influencing access to MSP are undertaken through a comprehensive household survey from the States of Maharashtra, Karnataka, and Madhya Pradesh. Finally, the book analyses import implications and import pricing behaviour for all major pulses imported by India. The book would be very useful for researchers working on the issues of agricultural production and food security, for agriculture and agri-business students, as well as for policy makers to understand the inherent dynamics in the pulses sector.

## Effects of COVID-19 restrictions on mechanization service providers and mechanization Equipment retailers: Insights from phone surveys in Myanmar

Intl Food Policy Res Inst COVID-19 continues to plague global food security not only directly through health effects but also indirectly through responses that restrict key economic functions of the agri-food sector. Despite the growing literature on the effects of COVID-19 on the agri-food sector, evidence on certain players like mechanization service providers (MSP) and mechanization equipment retailers (MER) remain scarce. This study provides insights into the effects of COVID-19 restrictions on MSP and MER in Myanmar, where the majority of MSP and MER are relatively new and potentially vulnerable to these economic shocks, using an unbalanced panel data from five rounds of phone surveys. We find that direct responses to COVID-19 involving movement restrictions, as well as disruptions in the market that led to increased cost and reduced availability of machinery and equipment, and growing financial challenges, had significantly negative effects on revenue prospects, service delivery, sales of machines and equipment by MSE and MER. Our analyses based on rare multi-round surveys during a single production season also reveal important dynamics in MSP's decision-making; negative revenue prospects at particular period can further hurt revenue prospects in subsequent periods, which is consistent with the hypotheses that agents like MSP who had incurred significant sunk-cost in machines can engage in more desperate and thus potentially suboptimal business practice to recover the sunk-cost. This may result in a vicious cycle of declining revenues in the future in the face of shocks like COVID-19. Overall, evidence suggests that, policies to minimize movement restrictions, various financial support, and mitigate any pessimism at the beginning of production season are all important to make sure MSP and MER continue to function effectively during the COVID-19 pandemic that persists in 2021.

## Manikins for Textile Evaluation

**Woodhead Publishing Manikins for Textile Evaluation is a key resource for all those engaged in textile and apparel development and production, and for academics engaged in research into textile science and technology. Creating garments that work with the human form, both stationary and in motion, is a complex task that requires extensive testing and evaluation. Manikins allow for performance testing of textiles in a safe, controlled, and appropriate environment, and are a key element in developing new textile products. Everyday apparel needs to be assessed for comfort, sizing and fit, and ergonomics, while technical and protective garments require extensive safety and performance testing. Manikins therefore range from simple representations of the human body to complex designs that simulate body temperature, sweating, and motion. Manikins are safe for use in hazardous testing environments, such as fire and flame protection, where wearer trials would be impossible. This book provides extensive coverage of manikin-based evaluation of protective, heat and flame resistant, medical, and automotive textile applications. The role of manikins in the development of day-to-day garments is also discussed, including fit, comfort, and ergonomics. The book is a key resource for all those engaged in textile and apparel development and production, and for academics engaged in research into textile science and technology. ### Economic Consequences for the United States and Source Areas

University of Chicago Press Since the 1970s, the striking increase in immigration to the United States has been accompanied by a marked change in the composition of the immigrant community, with a much higher percentage of foreign-born workers coming from Latin America and Asia and a dramatically lower percentage from Europe. This timely study is unique in presenting new data sets on the labor force, wage rates, and demographic conditions of both the U.S. and source-area economies through the 1980s. The contributors analyze the economic effects of immigration on the United States and selected source areas, with a focus on Puerto Rico and El Salvador. They examine the education and job performance of foreign-born workers; assimilation, fertility, and wage rates; and the impact of remittances by immigrants to family members on the overall gross domestic product of source areas. A revealing and original examination of a topic of growing importance, this book will stand as a guide for further research on immigration and on the economies of developing countries.
