Phase Conjugation of Laser Emission

Nova Publishers This volume presents results from fundamental research on the phenomenon of phase conjugation of laser emission discovered at the Physics Institute of the Academy of Sciences during stimulated scattering in hypersound, and with four-wave interaction in a wavelength range from the visible through the mid-infrared. Fundamentally new optical designs and methods of controlling laser emission are proposed and tested experimentally on the basis of this effect.

New Urban Worlds

Inhabiting Dissonant Times

John Wiley & Sons It is well known that the world is transitioning to an irrevocable urban future whose epicentre has moved into the cities of Asia and Africa. What is less clear is how this will be managed and deployed as a multi-polar world system is being born. The full implications of this challenge cry out to be understood because city building (and retrofitting) cannot but be an undertaking entangled in profound societal and cultural shifts. In this highly original account, renowned urban sociologists AbdouMaliq Simone and Edgar Pieterse offer a call for action based fundamentally on the detail of people's lives. Urban regions are replete with residents who are compelled to come up with innovative ways to maintain or extend livelihoods, whose makeshift character is rarely institutionalized into a fixed set of practices, locales or organizational forms. This novel analytical approach reveals a more complex relationship between people, the state and other agents than has previously been understood. As the authors argue, we need adequate concepts and practices to grasp the composition and intricacy of these shifting efforts to make visible new political possibilities for action and social justice in cities across Asia and Africa.

Prealgebra

"Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.
