"Europe" Turned Local - The Local Turned European? LIT Verlag Münster This book draws theoretically and methodologically from the sociology of curriculum, educational policy, and comparative education to meta-analyze the findings of nine separate studies exploring constructions of "Europe" in the secondary school curricula of Social Studies from a number of countries: Germany, Greece, France, Poland, Cyprus, Sweden, Ireland, and Northern Ireland, as well as the Autonomous Community of the Basque Country (Spain). The objectives of the book are threefold: first, to explore constructions of "Europe" and "European identity-citizenship" in these countries' curricula; second, to explore whether, and, if so, how these findings indicate a "Europeanization" of national curricula; and third, to discuss the similarities, differences, continuities, discontinuities, and tensions identified when comparing these curricula. (Series: Europa lernen. Perspektiven für eine Didaktik europäischer Kulturstudien - Vol. 2) **Working-Class Formation Nineteenth-Century Patterns in Western Europe and the United States** Princeton University Press Applying an original theoretical framework, an international group of historians and social scientists here explores how class, rather than other social bonds, became central to the ideologies, dispositions, and actions of working people, and how this process was translated into diverse institutional legacies and political outcomes. Focusing principally on France, Germany, and the United States, the contributors examine the historically contingent connections between class, as objectively structured and experienced, and collective perceptions and responses as they develop in work, community, and politics. Following Ira Katznelson's introduction of the analytical concepts, William H. Sewell, Jr., Michelle Perrot, and Alain Cottureau discuss France; Amy Bridges and Martin Sheffer, the United States; and Jargen Kocka and Mary Nolan, Germany. The conclusion by Aristide R. Zolberg comments on working-class formation up to World War I, including developments in Great Britain, and challenges conventional wisdom about class and politics in the industrializing West. **New Social Movements In Western Europe A Comparative Analysis** Routledge First published in 1996. How are political conflicts organized and articulated in the twenty-first century? And how does the transformation of territorial boundaries affect the scope and content of political conflicts? This book sets out to answer these questions by analyzing the results of a study of national and European electoral campaigns, protest events and public debates in six West European countries. While the mobilization of the losers in the processes of globalization by new right populist parties is seen to be the driving force of the restructuring of West European politics, the book goes beyond party politics. It attempts to show how the cleavage coalitions that are shaping up under the impact of globalization extend to state actors, interest groups and social movement organizations, and how the new conflicts are framed by the various actors involved. **Industrial and Labor Relations Review Earth Resources: A Continuing Bibliography with Indexes (issue 59) Problems of Communism Resources in Education New Publications of the U.S. Geological Survey Courses and Degrees Civil Service Systems in Western Europe, Second Edition** Edward Elgar Publishing This thoroughly revised and updated second edition of Civil Service Systems in Western Europe presents a comprehensive overview of the important issues in modern bureaucracies and provides a comparative analysis of the civil service systems of various Western European nations. **Cultural History in Europe Institutions - Themes - Perspectives** transcript Verlag What is the current state of discussion in Cultural History? In contrast, until recently there has been much less debate about the fate of religion. 'Globalization' has been viewed as part of the rationalization process, which has already relegated religion to the dustbin of history, just as it threatens the nation, as the world moves toward a cosmopolitan ethics and politics. The chapters in this book, however, make the case for the salience and resilience of religion, often in conjunction with nationalism, in the contemporary world in several ways. This book highlights the diverse ways in which religions first and foremost make use of the traditional power and communication channels available to them, like strategies of conversion, the preservation of traditional value systems, and the intertwining of religious and political power. Nevertheless, challenged by a more culturally and religiously diversified societies and by the growth of new religious sects, contemporary religions are also forced to let go of these well known strategies of preservation and formulate new ways of establishing their position in local contexts. This collection of essays by established and emerging scholars brings together theory-driven and empirically-based research and case-studies about the global and bottom-up strategies of religions and religious traditions in Europe and beyond to rethink their positions in their local communities and in the world. **Oxford Textbook of Psychopathology** Oxford University Press While most abnormal psychology texts seem to aim solely for breadth, the acclaimed Oxford Textbook of Psychopathology aims for depth, with a focus on adult disorders and special attention given to the personality disorders. travel, tourism and entertainment industries forever. Now a global vacation empire, the original park in Anaheim, California, has been joined by massive complexes in Florida, Tokyo, Paris, Hong Kong and Shanghai. Spanning six decades, three continents and five distinct cultures, Sabrina Mittermeier presents an interdisciplinary examination of the parks, situating them in their proper historical context and exploring the distinct cultural, social and economic landscapes that defined each one at the time of its construction. She then spotlights the central role of class in the subsequent success or failure of each venture. The first comparative study of the Disney theme parks, this book closes a significant gap in existing research and is an important new contribution to the field, providing the first discussion of the Disney parks and what they reveal about the cultures they are set in. There has been a lack of focus on cross- and trans-cultural analyses of theme parks generally and Disney theme parks specifically, until now. It is also particularly interesting – and will be welcomed for it – for the non-United States context of the study. This is a thorough examination of all of the existing Disney Parks and how they function within their respective cultures. While Disney themes and characters attempt to be universal, the author does a good job of arguing for where this is not possible and how glocalization is crucial to the parks' successes. The writing is academic, but it is not inaccessible. It will have wide disciplinary appeal within academia, as tourism studies cross into a variety of fields including history, American studies, fandom studies, performance studies and cultural studies. It will be invaluable to those working in the field of theme park scholarship and the study of Disney theme parks, theme parks in general and related areas like world's expositions and spaces of the consumer and lifestyle worlds. It will also be of interest to Disney fans, those who have visited any of the parks or are interested to know more about the parks and their cultural situation and context. **On the East-west Slope Globalization, Nationalism, Racism and Discourses on Eastern Europe** Central European University Press

Melegh's work offers a powerful analysis of the sociological and symbolic meanings of East-West in Europe after the end of the Cold War. While the fundamental poles of East and West remain, both their meaning and their relationship to one another have shifted profoundly since the late 1970s. Melegh exposes the underbelly of liberal characterizations of East-West, highlighting the polarizing effect of extreme nationalism and ethnic racism. The theoretical underpinnings of this work involve the ideas of preeminent theorists such as Karl Mannheim, Michel Foucault and more recently Maria Todorova and Iver Neumann. This work casts into fine relief how the "East-West Slope" oriented negatively from West to East has emerged from liberal characterizations of this project. The book analyzes the historical change in East-West discourses from a modernizationist type to a new/old civilizational one. In addition, this is one of the first attempts to link post-colonial analysis to developments in Eastern Europe.
